

Now, the power of the personal
computer is at your fingertips.

 HEWLETT
PACKARD

Introducing the Hewlett-Packard 150 personal computer.

Touch the screen.

You're in control of a revolutionary new productivity tool from Hewlett-Packard.

The HP 150 personal computer.

Using HP Touch, the touch sensitive screen of the HP 150, commands, cursor movement, and data movement can all be accomplished by effortlessly touching the screen.

In minutes, you'll be solving a wide range of complex problems just by pointing your finger. It's as easy as that!

Take a look at *all* the outstanding features the HP 150 has to offer:

HP Touch—what could be more natural?

People naturally point at what they want. Which is why Hewlett-Packard developed HP Touch—a special touch sensitive screen that's included free with every HP 150 system.

With HP Touch, you don't have to worry about pressing buttons, rolling a "mouse" around a desk, or constantly glancing back and forth between the keyboard and display.

Instead, you just read what's on the screen, point to the command you want, and the HP 150 does the rest.

You spend more time getting answers, and less time using the keyboard.

We just made personal computing easy.

We know that you've got better things to do with your time than study complicated manuals or work your way through lengthy "tutorials."

That's why you'll love the HP 150.

It's a personal computer that's so easy to use, you'll be up and running in no time.

And it comes with a user's guide that is truly easy to understand. The guide even features a special section on how to get started.

Demonstrations of basic applications are also available and easy to follow. If you're looking for a personal computer that solves problems, instead of creating them, take a close look at the HP 150.

Software for every application.

A wide range of carefully selected business application software is available for the HP 150. All the software listed below has been developed, improved, or customized, specifically for the HP 150, and is designed to boost productivity:

■ **VisiCalc®** for spreadsheet planning and reporting applications, forecasting, budgeting, and more.

■ **WordStar®** for word processing. Create custom form letters, inter-office correspondence, reports, and more.

■ **Graphics** to analyze and present data more professionally.

■ **Condor** for database (list) management. Keep track of business information, including customer lists and parts inventories.

■ **MemoMaker** for creating short memos and drafts.

■ **DSN/Link** for transferring data with the HP 3000, logging information from national information services, and exchanging information with other Series 100 computers.

■ **BASIC** for developing your own applications.

■ **Third party software** is available from major software suppliers, to meet your specific needs.

Another exciting feature of the HP 150 is its ability to integrate software information. Data can be unified in many different ways. For example, VisiCalc spreadsheets and Condor database reports can be read directly into WordStar for inclusion into documents without retyping.

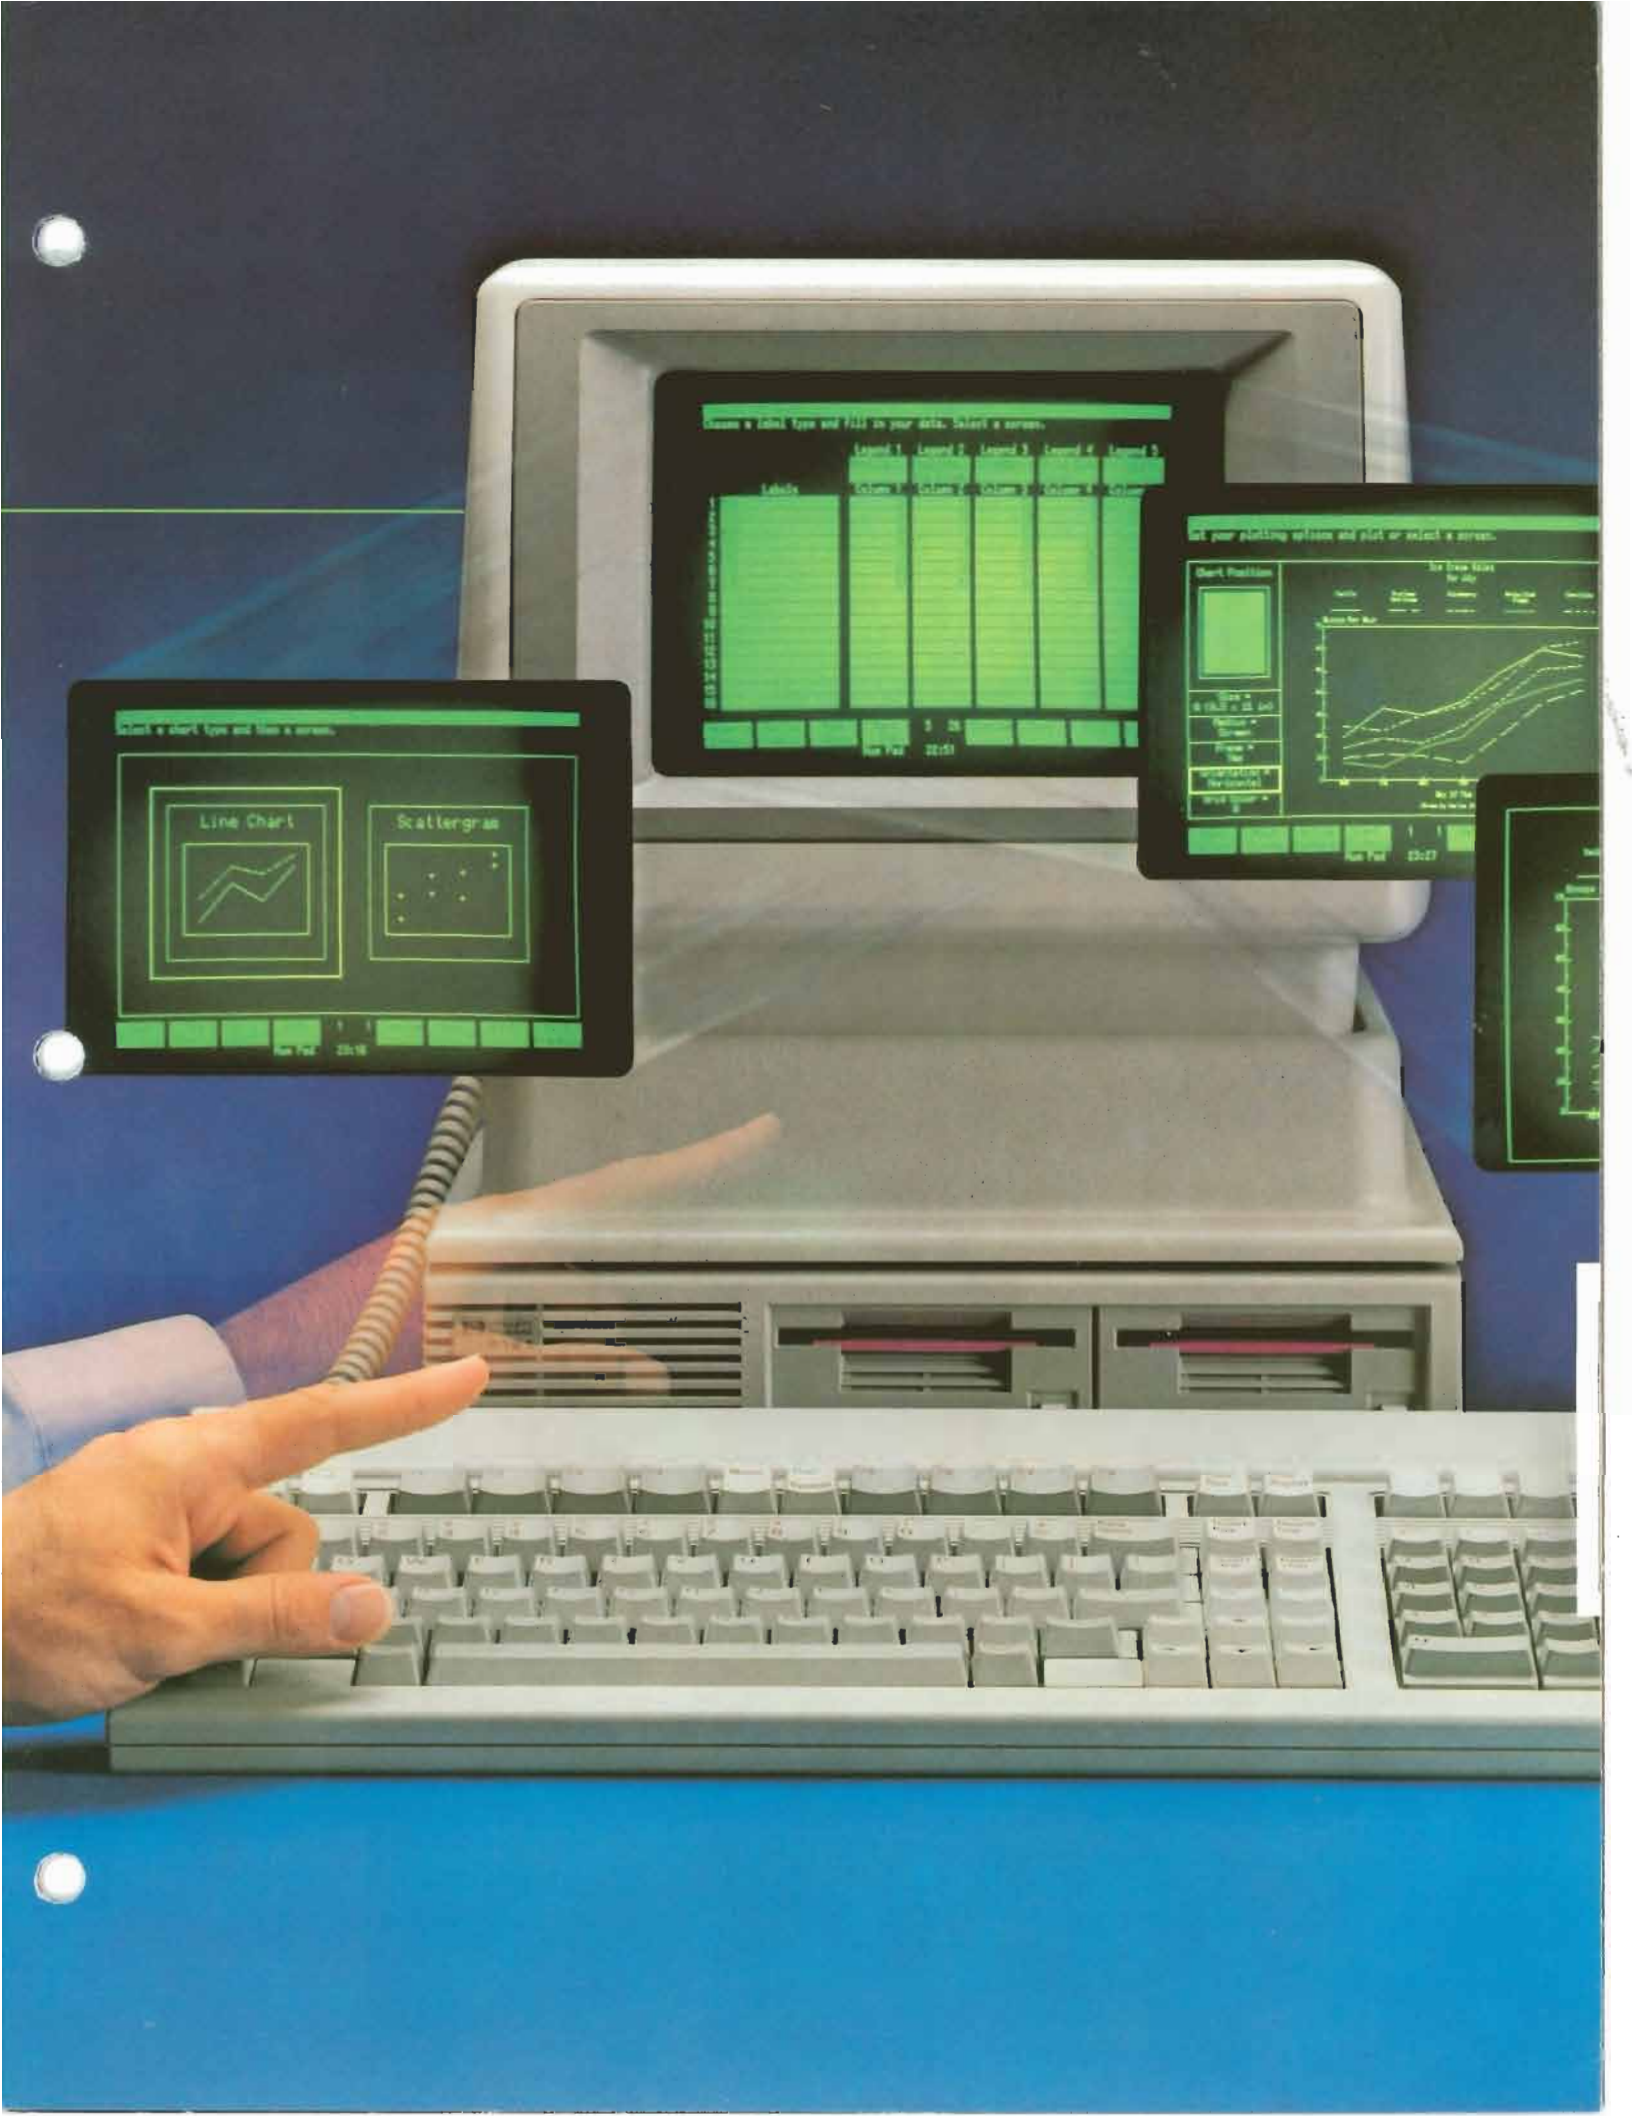

VisiCalc® is a registered trademark of VisiCorp.

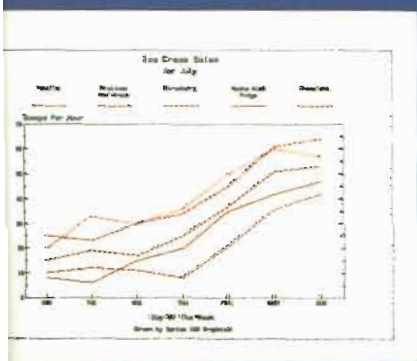

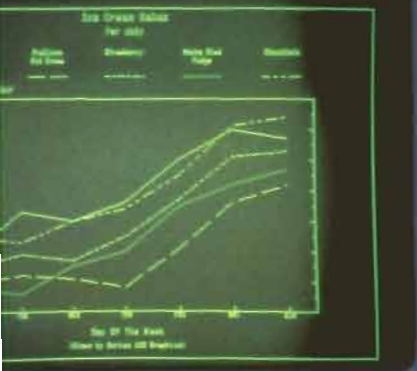

WordStar® is a registered trademark of MicroPro International Corporation.

MS™-DOS is a trademark of MicroSoft Corporation

Compact and practical.

If you're like most people, you probably don't have a lot of empty space on your desk. That's why we designed the HP 150 to be compact and extremely practical. In less than the space occupied by an open looseleaf binder, we've packaged the system disc drives, processor, display, keyboard, and even a printer!

We've also made sure that when you *do* need a keyboard (not all that often), you'll find the comfortable keys, conveniently placed.

Check out our hardware.

We think you'll be impressed with the wide range of peripherals Hewlett-Packard can provide. From printers to plotters to disc drives, to mass storage devices, HP can deliver the peripherals you need.

You can also count on Hewlett-Packard to back the HP 150 with the kind of service and support that's made us famous.

HP 150 System Summary

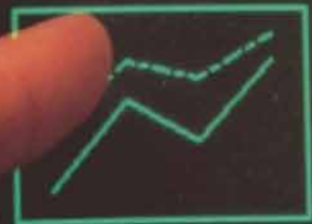

- Built-in touch sensitive screen
- 8088 microprocessor
- MS™-DOS 2.0 operating system
- 256K bytes of main memory expandable to 640K bytes
- 2 pages of 24 x 80 columns of display memory (6K bytes)
- On screen graphics
- 512 x 390 graphics display

- 27 lines x 80 columns. Two lines used for function key labels, 1 line for system error/status messages.
- User installable accessories (memory, communications, internal printer)
- Detachable, typewriter-style, low-profile keyboard
- 2 RS 232C ports
- HP-IB interface for peripherals
- Personal Application Manager
- System Disc Applications
