Take a look at the industry's leading OLTP technology

In today's competitive markets, success depends on your company's ability to cope with changing information faster than ever before. Your business-critical, transaction-based applications must be processed efficiently throughout the day. These on-line transaction processing (OLTP) applications require computers that provide high levels of performance and reliability.

Hewlett-Packard's industry-leading OLTP solution, the HP 3000 family of compatible systems and servers helps you manage your business today, protects your current systems investment, and sets your foundation for the future. Its performance, functionality, reliability, and upgradability add up to a competitive advantage

for your company — all at a low cost of ownership. The HP 3000 also supports commercial open systems standards, providing you the benefits of application portability and multivendor connectivity.

Whether yours is a centralized or distributed environment, the HP 3000 family delivers the information you need to make faster, better decisions, increase operational efficiency, improve customer service, and control costs.

HP 3000 PA-RISC based systems provide leading OLTP performance at a low cost of ownership.

HP 3000 Series 900 family

The broad HP 3000 family of compatible systems and servers delivers premium performance and value to organizations of all sizes — from small departments and branch offices to large, mainframe-class on-line transaction processing environments.

	MICROLX	MICRORX	920	922 LX	922 RX	922	932	948	958	955	960	980/100	980/200
Relative Performance (920 = 1)	.3-.5	.3-.5	1	1.7	1.7	1.7	2.8	6	8.5	5.4	7.5	13	20

Discover unequalled performance and reliability

Two key components of a unique technology foundation combine in the HP 3000 to give you high performance, reliability, and leading price/performance, as measured by industry-standard OLTP benchmarks:

HP's Precision Architecture-RISC (PA-RISC), based on reduced instruction set computing (RISC) technology, implements instructions directly in the hardware to increase processing speed and deliver superior performance. With fewer parts, PA-RISC also means greater reliability and a lower overall cost of ownership for you.

The HP 3000 system software, specifically designed for OLTP and coupled with PA-RISC, produces fast response and high throughput. Powerful and robust enough to run large-scale applications for hundreds of users, the HP 3000 is still exceptionally easy to use — even for entry-level applications.

Cut costs, improve service with HP systems management

If yours is like most companies, your goal is to control operational costs without jeopardizing quality or customer service. So, as you evaluate a computer system, systems management costs are a major concern. With HP's mainframe-class systems management solutions, you can have superior functionality while lowering overall costs.

When your requirements call for managing a large, distributed network, your HP 3000 operators can efficiently monitor and manage remote systems from a single, PC-based console. While centralizing operations control and expertise, this capability also provides a foundation for operatorless control at remote sites.

The HP 3000 provides large-systems-management tools and ensures data integrity. And HP's on-line backup capability, combined with our cost-effective high-availability solutions, delivers 24-hour support for business-critical OLTP applications.

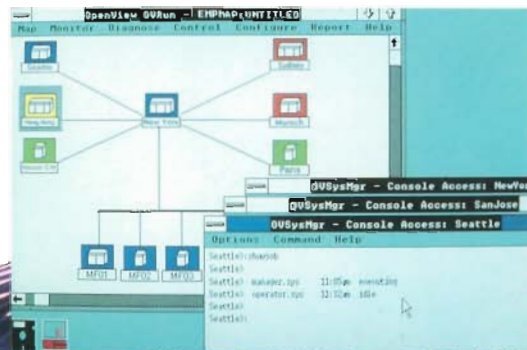

Build for tomorrow with HP's solutions today

HP and our premier value-added business partners offer the software solutions you need, including applications for discrete and process manufacturing, wholesale distribution, state and local government, to name a few. Chances are you'll find one ideally suited to your business.

The HP 3000 environment also allows you to create and maintain custom applications with a comprehensive set of application development and computer-aided software engineering tools. And the HP 3000's support of open application programming interfaces enables you to develop and port multivendor applications.

Databases supported include HP's industry-standard SQL relational database and our network-model database. These are tightly integrated with PA-RISC and the HP 3000 operating system for high-volume transaction processing. The HP 3000 also supports the leading independent database management systems, enabling you to choose the solution that best meets your needs.

HP Openview System Manager provides an intuitive environment for managing a distributed network of systems.

Put the power of information where you need it

HP NewWave Office, combined with HP's leadership in client/server OLTP computing, turns your computing resources into a competitive advantage.

Coupling PC "clients" with HP 3000 servers permits simultaneous access to OLTP applications and PC productivity solutions, through a consistent, intuitive, windowed user interface and HP's NewWave environment. And with proper security, users can access corporate databases from a PC without expert assistance.

HP's PC-based decision support tools assure better, faster decisions by making it easy to gather and analyze data. The HP 3000 also makes communicating those decisions throughout the organization easy and instantaneous.

When you choose the HP 3000, you're assured of building a solid foundation for client/server functionality.

Network systems across your organization

The HP 3000 supports international industry-standard networking protocols such as OSI and key de facto protocols such as ARPA, TCP/IP, SNA, LanManager, and Novell NetWare. As a result, HP 3000 systems communicate with a wide range of personal computers, minicomputers, and mainframes over local- or wide-area networks — making them ideal hubs for large, distributed applications. You gain access to information, applications, and resources, even across multi-vendor networks and PC LANs.

The easy-to-use HP NewWave graphical environment enables HP 3000 users to easily access and analyze the critical information they need to make better, faster decisions.

Expect the best in service and support

HP continues to set standards of excellence in customer support. In fact, over the past seven years, HP has ranked the highest in overall customer support and satisfaction in U.S. Datapro surveys.* And independent, international research studies rate HP as a worldwide leader in service and support. So you can expect us to be there when you need us.

Call your local HP sales office today. One of our sales representatives will show you how the HP 3000 solution can meet your needs today — and tomorrow.

*Based on maintenance effectiveness, maintenance responsiveness, troubleshooting, documentation, education, and software support.

The HP 3000 supports commercial industry standards for databases, tools and languages, networking, and user interfaces. So you gain the benefits of access to additional applications, application portability, and multi-vendor interoperability.

Protect your system investment

Whether your organization is a small department or branch office, or a large, mainframe-class OLTP environment, there is an HP 3000 computer to meet your needs. With its broad range of compatible systems and servers, the HP 3000 family can deliver premium performance and value today — and grow with you through the '90s and beyond.

All HP 3000 systems are compatible. So when it's time to expand, your investments in hardware, software, and training are protected. And because applications move easily from one system to the next, you can be confident that the applications you create today will run on more powerful HP 3000 systems in the future.

Obtaining the performance of a more powerful system typically requires only a simple processor board upgrade. When you need a larger system, you can trade in your present HP 3000 for credit under our unique upgrade-credit policy. HP's continuing development of higher-performing uniprocessors, symmetric multiprocessing, and OLTP software performance enhancements keeps the HP 3000 family ahead of your increasing performance needs.

For expandability and mainframe-class performance to support large data processing applications, take a look at the powerful HP 3000 Series 955, 960, and 980.

These integrated HP 3000 systems and servers combine innovative technology — including large-capacity disk drives and high-speed backup — into a compact package.

HP MICRO 3000 systems let you plug in a cost-effective, integrated solution that meets your entry-level computing needs.
