
**The HP Series 6000
Models 335H, 670H/XP/FL
and 1.34FL Disk Storage
Systems are:**

Highly Reliable

- a 30 to 50 percent increase in Mean Time Between Failure (MTBF) from previous HP products

Low Cost

- a 30 to 50 percent reduction in cost per megabyte at purchase (less than \$12 U.S. per megabyte on most models)
- a reduction in service cost of greater than 50 percent

Space Efficient

- up to eight times the megabytes per square foot over previous HP offerings

Existing

19511A

19514A

New

46299A

92211Y

Adapter kits allow the disk storage systems to fit in existing cabinetry. The new, small, space efficient cabinets are the only products recommended when ordering new disk storage systems.

Please contact your local HP telesales or sales representative for more information.

The HP Series 6000 Models 335H, 670H/XP/FL and 1.34FL Disk Storage Systems offer disk storage capacities from 335 megabytes to 1.34 gigabytes. They are supported on entry-level to large high-end multiuser systems, including the HP 1000, 3000 and 9000 systems.

Based on Hewlett-Packard's high performance 5.25-inch disk drive, these disk storage systems set new standards for price, performance, and reliability.

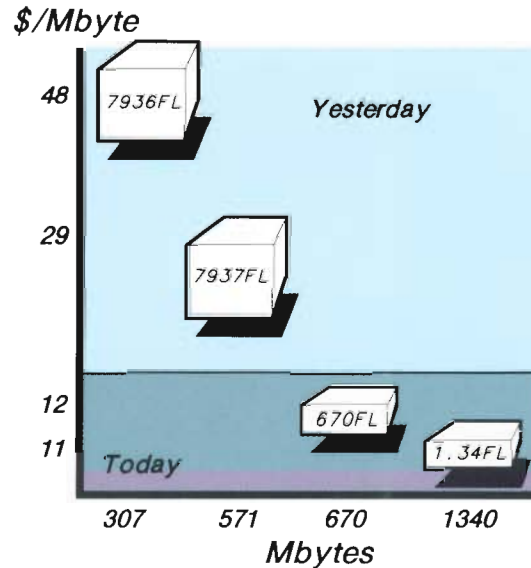

Select the controller of your choice: HP-FL, HP-IB Cache or HP-IB. HP-FL models come in capacities of 1.34 gigabytes or 670 megabytes. The HP-IB Cache model offers 670 megabytes and HP-IB models come with 670 or 335 megabytes of disk storage capacity.

Choose an HP disk storage system and experience reliability and performance at its best, with savings that are hard to match!

HP-FL Controllers

Models 670FL and 1.34FL

- Fiber-optic (FL) controller
- Designed for high-end multiuser systems
- Tuned for HP-PA systems
- Low cost add-on P-Bus only option

HP-IB and HP-IB Cache Controllers

Models 335H and 670H/XP

- HP-IB (H) or HP-IB Cache (XP) controller
- Designed for multiuser systems
- 670 megabyte versions ideal for mid- to high-end systems
- Controller upgrade kits available
- 335 megabyte version for entry-level systems
