HP 9000 Series 700 Family of Workstations

The Best Fit for All Your Enterprise Needs

Whatever your requirements—high power, cost effectiveness, top-of-the-line graphics—HP's Series 700 workstation family has the perfect fit for you. Open systems architecture and client/server networking. Support for thousands of the industry's best application solutions. Industry-leading price/performance. You get it all from HP—including reliable service and support from a supplier you can depend on.

HP's Series 700 family includes a full range of workstations—from entry-level price/performance leaders, to mid-range workhorses, to high-end performance superstars. A complete family of X stations and terminals. Add to this a full range of graphics systems and you've got the solutions that are right for you.

The Series 700 provides some of the best investment protection available anywhere. Not only are they built on open systems standards, but they're fully upward- and downward-compatible—within the Series 700 family as well as with HP's Series 800 servers. That's because both the Series 700 and the Series 800 are based on HP's powerful PA-RISC processor architecture and the UNIX-based HP-UX operating system.

And for further investment protection, HP offers a comprehensive package of system upgrades, sweetened by attractive and aggressive discounts—so that you can keep up with the latest advances in workstation technology without endangering your equipment investment in the slightest.

Power. Performance. Open systems. Sophisticated graphics. Thousands of application solutions. Investment protection. And service and support from an industry leader. It all adds up to the HP Series 700 workstation family. The best fit for all your enterprise computing needs.

For more information, contact any of our worldwide sales offices or HP Channel Partners. (In the U.S., call 1-800-637-7740; in Canada, call 1-800-387-3867.)
