Introduction

SERIES 80 SOFTWARE CATALOG

January, 1982

INTRODUCTION

The Series 80 Software Catalog is a reference guide to programs currently available for Series 80 Personal Computers. Series 80 users should find this catalog a convenient source for selecting programs from a wide variety of fields and application areas.

The catalog is divided into two sections. The first is comprised of programs contributed by Series 80 Users' Library members and by Hewlett-Packard. These programs provide the user with inexpensive tools to help solve computing problems. The price listed for each program includes documentation and a copy of the program listing. Programs may be purchased recorded on magnetic media for an additional charge. Approximately 30 programs may be recorded on one cartridge or disc, depending on individual program size. Consult the program price list at the end of this section for complete pricing information.

The second section of the catalog is devoted to application packages; programs that provide total software solutions. These packages have been developed both by Hewlett-Packard and by independent Series 80 Software Suppliers. These packages provide a valuable service to users. They contain concise, easy to understand documentation and recorded media. Some are available only on data cartridge, and others may be ordered on either disc or cartridge. A few of the pacs contain both a recorded cartridge and disc.

Whether you are looking for an inexpensive program to solve a specific problem, or want a total software solution, the Series 80 Software Catalog is your guide to finding just the right software to meet your needs.

USING THE CATALOG

The catalog contains the following:

Application Category Index

This index gives a breakdown of subject areas covered by Series 80 Software. Select the category that most appropriately describes the subject area you wish to

investigate. Once the program is located in the index, consult the summary for that particular program for detailed information.

Cross References

This section is a cross-reference of programs from the Hewlett-Packard Application Packages and Users' Library Solution Books and the corresponding Users' Library program numbers. All Solution Book programs may be purchased separately through the Library, but not all Application Pac programs are available individually.

Program Summaries

Each program summary provides a description of the software, the contributor's or supplier's name and address, and the peripherals and/or enhancements needed to run the software. Contributed program summaries indicate the number of bytes consumed by the program.

Program summaries are listed in the Catalog in order of program number (part number for HP Application Pacs). The applicable Series 80 mainframe required is also given.

PROGRAM SUPPORT

User-contributed programs are reviewed by the Library prior to acceptance. At that time a check for completeness and proper documentation is performed. After acceptance into the Library, the responsibility for revising programs rests with the contributor. Programs developed by indepdent Software Suppliers are maintained soley by the Suppliers. Any questions regarding independently developed application packages should be addressed to the Supplier listed on the program summary, or your local Series 80 dealer. Application packages developed by Hewlett-Packard are supported by the company's staff. Hewlett-Packard makes no express or implied warranty with regard to program material purchased from the Users' Library or from independent Software Suppliers.

ORDERING PROGRAMS

Contributed programs may be purchased through a local Series 80 dealer, or directly from the Users' Library. Order forms are available upon request. Complete the form in full and be certain to indicate the type of media desired if

purchasing programs recorded. Include a check, money order, or cashier's check in U.S. dollars only. VISA, Master Card and American Express are also accepted. Foreign customers must attach payment in U.S. dollars to the order form. All customers should include their name, address, and member number. Be sure to order the contributed programs by program number.

The Library fills program requests by photocopying the following standard documentation submitted by the contributor:

a. Program Description I - gives a thorough description of the program, and lists peripherals and ROMS required.
b. Program Description II - provides a sketch of the problem (if applicable) and shows sample problem(s) with solution(s).
c. Program Description III - lists any operating limits or warnings to the program, points to helpful reference sources, and lists and describes the program variables.
d. User Instructions - gives step-by-step instructions to the user on how to run the program.
e. Program Listing - gives step-by-step listing of the program with comments.

Application packages cannot be purchased from the Users' Library. They should be purchased from your local Series 80 dealer. Packages developed by independent Software Suppliers may be purchased either through a dealer or directly from the Supplier.

SUBMITTING CONTRIBUTED PROGRAMS

The Users' Library was established to provide a source of readily available and useful software programs written for the Series 80 Personal Computers. Your programs are a necessary ingredient for insuring the Library's success. Please submit any program you feel will be of value to other members. The program should be tested and proven in practice. Refer to the Contributor's Guide (available from the Library) for program submittal instructions. The forms necessary for complete program documentation are included with the Guide. The Library offers a bonus for accepted programs. The Library also reserves the right to remove any program from the Catalog at any time.

Note to Users' Library members outside the U.S.: All program documentation in the Library is in English. Program contributions will be considered for acceptance only if submitted in English.

INDEPENDENTLY DEVELOPED APPLICATION PACKAGES

A package describing the Series 80 Software Supplier Program is available to prospective suppliers at no charge. Anyone interested in developing application packages for Series 80 Personal Computers should contact the Independently Developed Software organization at the Personal Computer Division of Hewlett-Packard.

KEEP YOUR ADDRESS CURRENT

To insure that you receive all necessary correspondence and future Series 80 Catalogs, always keep us informed of your current address.

OUR ADDRESS

Send inquiries, program submittals, or orders for user-contributed programs to:

HEWLETT-PACKARD
PERSONAL COMPUTER DIVISION
SERIES 80 USERS' LIBRARY
1010 NE CIRCLE BLVD.
CORVALLIS, OR 97330

THANK YOU FOR YOUR SUPPORT OF THE LIBRARY!

SERIES 80 USERS' LIBRARY

Contributed Program Price List

PROGRAMS	PRICE MEMBER	NON-MEMBER
BASIC Program (unless otherwise marked)	$ 6.00	$ 10.00
Binary Program (recording necessary; add media cost)	12.00	15.00
Binary Enhancement Package (contains 22 Binary and one BASIC utility programs)	150.00	150.00
RECORDING MEDIA		
Cartridge	$ 14.00	$ 18.00
5¼" Flexible Disc	6.00	10.00

When ordering programs, assume that up to 30 programs can usually be recorded on one cartridge or disc, depending on program size.

NOTE: Consult individual program summaries for complete information on each program ordered. Some BASIC programs contain data files and must be purchased recorded. Others require Binary programs (available separately) to run properly. If you do not already have the required Binary program, order it when you order the BASIC program.

CUSTOMERS OUTSIDE THE U.S. AND CANADA PLEASE ADD 10% TO ORDER TOTAL FOR POSTAGE AND HANDLING CHARGES. PLEASE SEND PAYMENT IN U.S. DOLLARS ATTACHED TO YOUR PROGRAM ORDER. THIS WILL INSURE THAT YOUR ORDER IS PROCESSED PROMPTLY UPON RECEIPT.

Index

INDEX OF CONTRIBUTED PROGRAMS

Library Program Number

000 BUSINESS AND FINANCE

000-0001	Compound Interest and Loan Amortization
000-0002	Discounted Cash Flow Analysis
000-0003	Depreciation Schedules
000-0004	Simple Interest and Interest Conversions
000-0005	Bonds
000-0006	Notes
000-0007	Break-Even Analysis
000-0008	Odd Days Interest
000-0009	Average Age of Letters
000-0010	Decision Maker
000-0011	Alphabetic Arranging
000-0012	Stock Value and Evaluation Report
000-0013	Bond Price Analysis
000-0014	Warrant Price Calculation
000-0015	Exponential Smoothing as a Stock Guide
000-0016	Stock Incentive Program
000-0017	Bond Switch Analysis
000-0018	Price/Earnings Ratio Calculation
000-0019	Bond Yield Analysis
000-0020	Stock Returns Report
000-0021	Securities Earnings Per Share Growth
000-0022	Present Values--Stream of Cash Flows
000-0023	Securities Portfolio Analysis and Determination
000-0024	Extended Risk Analysis
000-0025	Capital Investment Analysis
000-0026	Discounted Return on Investment and Payback
000-0027	Investment Return (Cash Flow)
000-0028	Efficient Corner Portfolios
000-0029	Proforma Income Statement and Balance Sheet
000-0030	Sales Commision Report

Library Program Number	
000-0031	Financial Ratios
000-0032	Lease Income
000-0033	Make-Buy Decision Analysis
000-0034	Loan Amortization
000-0035	Mortgage Analysis
000-0036	Cost of Equity Capital
000-0037	Depreciation Method Comparison
000-0038	Simple Loan Analysis
000-0039	Income Statement
000-0040	Mortgage Plan Comparison
000-0041	Capital Investment Analysis
000-0042	Exponential Smoothing on Price Data
000-0043	Cash Flow Analysis
000-0044	Compound Interest
000-0045	Lease Analysis as Determined by the Lessee
000-0046	Annuity Analysis
000-0047	M/M/1 Queueing System
000-0048	M/M/S Queueing System
000-0049	Linear or Quadratic Program Problem Solving
000-0050	Shortest Route Using the Method of Dynamic Programming with Successive Approximation in Functional Space
000-0051	Linear Trend Forecasting
000-0052	First Difference, Percent Changes, Percent Difference
000-0053	Critical Path Analysis
000-0054	Network Flow Determination
000-0055	Real Estate Investment Analysis
000-0056	Inventory Gross Profit
000-0057	Runoff Text Formatter
000-0058	Print VisiCalc^{tm} Worksheet to a Plotter with HP-GL
000-0059	Data File to VisiCalc^{tm} /SL File
000-0060	Mortgage Analysis (Version 1.0)
000-0061	Use VisiCalc^{tm} to Accumulate Year-to-Date Data
000-0062	File Composer for DPLOT
000-0063	Calendar Interest
000-0064	Personal Data Management Package

Library Program Number

100 ENGINEERING

100-0001	FCC Distance - Bearing Calculation
100-0002	Gray Code Generator and Inverter
100-0003	Bode Plot of a Transfer Function
100-0004	Passive Solar Simulator (STENET)
100-0005	Low Pass Filter Design
100-0006	Ladder Network Analysis
100-0007	Active Filter Design
100-0008	Frequency Plot of Poles and Zeros in a Complex Plane
100-0009	Passive Filter Design
100-0010	Mixer Spurious Response
100-0011	Microwave Parameter Conversion
100-0012	AC Circuit Analysis
100-0013	Printing or Display in Engineering Units
100-0014	Reinforced Concrete Beams
100-0015	Stress in Thick-Walled Cylinders
100-0016	Special Section Properties
100-0017	Compressive Buckling
100-0018	Section Properties
100-0019	Steel Column Formula
100-0020	Correct Steel Beam Use
100-0021	Solution of Polynomial Equations
100-0022	Two-Dimensional Heat Transfer in a Thin Plate
100-0023	Plane Truss Analysis
100-0024	Vessel Capacity Evaluation
100-0025	Mohr's Circle
100-0026	Polar Function Plotter
100-0027	Interpretation of EE Units
100-0028	Analysis of a Balanced Polyphase Induction Motor
100-0029	Eigenvalues and Eigenvectors of a Real Symmetric Matrix
100-0030	Practice in AC Analysis
100-0031	Practice with Exponential Functions of Time
100-0032	Analysis of Current and Voltage Dividers
100-0033	Algebra of Complex Numbers

Library Program Number	
100-0034	Radio Horizon Calculator
100-0035	Erection Stresses in Vertical Vessels
100-0036	Paraxial Ray Tracing
100-0037	Step or Impulse Response of Transfer Function
100-0038	Modal Analysis for Statically Coupled Linear Oscillators

Library Program Number

200 MATH AND NUMERICAL ANALYSIS

200-0001	Hyperbolic Functions
200-0002	Fast Fourier Transform
200-0003	Fourier Series Coefficients for Unequally Spaced Data Points
200-0004	Fourier Series Coefficients for Equally Spaced Data Points
200-0005	Chebyshev Polynomial
200-0006	Ordinary Differential Equations
200-0007	Integration with Unequally Spaced Data Points
200-0008	Integration with Equally Spaced Data Points
200-0009	Solution to F(X) on an Interval
200-0010	Simultaneous Equations
200-0011	Triangle Solutions
200-0012	Complex Operations
200-0013	Jacobi Method - Matrix Eigenvalue Problem
200-0014	Bessel Functions $J_0(x)$, $J_1(x)$, $J_2(x)$, and jinc(x)
200-0015	Contour Plot
200-0016	Aitkin's Interpolating Polynomial
200-0017	Complex Trigonometric Functions
200-0018	Spherical Triangles
200-0019	Parabolic Equation
200-0020	Area Under a Curve
200-0021	Linear Equations - Gaussian Reduction
200-0022	Polygon Area
200-0023	Bessel Functions
200-0024	Complex Determinant
200-0025	Simultaneous Linear Equations
200-0026	Quadratic Equation
200-0027	Interpolation of Non-Linear Functions
200-0028	Vector Exponentiations
200-0029	General Fast Fourier Transform
200-0030	Real to Complex Fast Fourier Transform
200-0031	Complex to Real Fast Fourier Transform
200-0032	Roots of Polynomials
200-0033	Definite Integral
200-0034	Vector Arithmetic

Library Program Number	
200-0035	Roots or Fixed Points of Non-Linear Functions
200-0036	Solution of First-Order Differential Equations
200-0037	Arithmetic Mean, Median and Standard Deviation
200-0038	Trigonometric Solutions of Triangles
200-0039	Properties of a Straight Line
200-0040	Quadratic Equation Solver
200-0041	Approximating the Derivative Using Secant Slopes
200-0042	Area of a Surface of Revolution
200-0043	Volume of a Solid of Revolution
200-0044	Length of a Curve
200-0045	Area Under a Curve
200-0046	Complex Linear Equations
200-0047	Base Calculator
200-0048	Algebra for Exponentials and Sinusoids
200-0049	Quick Plot of Real Data
200-0050	Stereographic Images
200-0051	Ordinary Differential Equations I
200-0052	Circular Segments
200-0053	Scattergram with Linear Regression Analysis
200-0054	Jacobian Elliptic Functions
200-0055	Function Plotter
200-0056	Cubic Equation Solver

Library Program Number

300 PROBABILITY AND STATISTICS

300-0001	Random Sample Generator
300-0002	Least-Squares Fit
300-0003	Probability Distribution Comparisons
300-0004	Probability of Chi-Square Values
300-0005	Expected Value of Perfect Information
300-0006	Chi-Square Test
300-0007	Exact Probability of an F-Ratio with Degrees of Freedom
300-0008	Binomial, Poisson and Hypergeometric Probabilities
300-0009	Fisher's Exact Probability Test
300-0010	Subjective Probability Distribution
300-0011	Analysis of Variance and F-Ratio
300-0012	Kruskal-Wallis One-Way Anova
300-0013	Three Factorial Analysis of Variance
300-0014	Regression/Correlation
300-0015	Analysis of Covariance
300-0016	Basic Statistics
300-0017	Confidence Limits
300-0018	Correlation Coefficient
300-0019	Pooled Mean and Standard Deviation
300-0020	Least Squares Fit, Multiple Y's per X
300-0021	Differences Between Variances
300-0022	Probabilities of Hitting NRA Metallic Silhouettes
300-0023	Step-Wise Regression
300-0024	Simple Regression and Plot
300-0025	Multiple Regression/Correlation
300-0026	Computing an Ergodic Markov Chain
300-0027	Confidence Limits for a Set of Data
300-0028	Random Hits on NRA Metallic Silhouettes
300-0029	Three-Factor Split-Plot Anova (p.qr)
300-0030	Three-Factor Split-Plot Anova (pr.q)
300-0031	One-Way Anova Using Summary Statistics
300-0032	Two-Way Anova Using Summary Statistics
300-0033	CRDAOV: Completely Randomized Design Analysis of Variance

Library Program Number	
300-0034	Comparing All Means With A Control
300-0035	Two-Way Split-Plot Anova
300-0036	One-Way Anova: Unequal Variances
300-0037	Averaging Coefficients of Correlation
300-0038	Percentage Correctly Classified
300-0039	Split-Plot Anova: Least Squares Solution
300-0040	Split-Plot Anova: Unweighted-Means Solution
300-0041	t Test With Unequal Variances (t*)
300-0042	Probability and Statistics
300-0043	Latin Square Anova: n>1
300-0044	Latin Square Anova: n=1

400 LIFE SCIENCES

400-0001	Photosyntesis Experiment

Library Program Number

500 PHYSICAL SCIENCES

500-0001	Spheroid Earth
500-0002	Unit Cell Calculations
500-0003	Young's Double Slit Experiment
500-0004	Lens Problem
500-0005	Snell's Law
500-0006	Photoelectric Effect
500-0007	Optical Absorption Spectra Simulation
500-0008	Propagation of Error
500-0009	Cloud Formation
500-0010	Electronic Configuration
500-0011	Empirical Formulas
500-0012	Projectile Motion
500-0013	Instantaneous Velocity
500-0014	Einstein Distortions
500-0015	Atomic Weight
500-0016	Sum of Two Waves
500-0017	Avogadro's Number
500-0018	Nuclear Decay
500-0019	Siderial Time and Polaris Position
500-0020	Subsonic Ballistics for Sports Implements and Ancient Arms
500-0021	Magnetic Field Picture
500-0022	Blackbody Radiation Characteristics
500-0023	Interplanetary Trajectories
500-0024	Chromatograph-Data Acquisition
500-0025	Planetary Positions
500-0026	Molecular Weight Determination
500-0027	Lens Calculations
500-0028	Seawater Salinity and Density
500-0029	Latent Heat of Vaporization
500-0030	Vapor Pressure Correlation

Library Program Number

600 SOCIAL AND BEHAVIORAL SCIENCES

600-0001 Natural Selection Experiment

700 MEDICAL ARTS AND SCIENCES

700-0001 Data Tablet Graphic Input

Library Program Number

800 HOME COMPUTING/GAMES

800-0001	Blackjack
800-0002	Maze Generator
800-0003	Birthday Plot
800-0004	Game of Life
800-0005	NIM
800-0006	King
800-0007	Hunt the Wumpus
800-0008	Hangman
800-0009	Race
800-0010	Lander
800-0011	Race Track
800-0012	Blockade
800-0013	WARI
800-0014	Cribbage
800-0015	Gomoku
800-0016	Reversi
800-0017	Poker Solitaire
800-0018	Qubic
800-0019	Biorhythm Comparison
800-0020	Pro Football
800-0021	Radioactive Decay Game
800-0022	Hunt the Hurkle
800-0023	Bagels
800-0024	Roulette
800-0025	Stock Market Game
800-0026	Golf Game
800-0027	Big Number Multiplication
800-0028	Golf
800-0029	Spirograph Simulation
800-0030	Personal Mailing List
800-0031	Yahtzee
800-0032	Star Wars
800-0033	Morse Code Trainer
800-0034	Maze-Solving Mouse

Library Program Number	
800-0035	Asteroid
800-0036	Telephone Number Alphabetizer
800-0037	Teaser
800-0038	Game of Bounce
800-0039	Jump - A Mathematical Game
800-0040	Certificate Craps
800-0041	Dice Toss Graphics and Statistics
800-0042	Master Mind
800-0043	Budget
800-0044	The Listmaker
800-0045	Maiden
800-0046	Truth Table Generator

Library Program Number

900 OTHER

900-0001	HP-85 BPlot Builder Utility
900-0002	LORAN-C Position Determination
900-0003	Copying Discs to Tapes (Binary)
900-0004	Array Organization and Initialization (Binary)
900-0005	Storing and Retrieving Programs in Standard Interchange Format (Binary)
900-0006	Storing and Retrieving Data in Standard Interchange Format (Binary)
900-0007	Tape Verification and Record Type (Binary)
900-0008	Retrieving HP-9845A Saved Programs (Binary)
900-0009	Converting ROM Statements to Mainframe Statements (Binary)
900-0010	Enhanced String Manipulation (Binary)
900-0011	Statistical Functions on an Array (Binary)
900-0012	Mathematical Functions (Binary)
900-0013	Enhanced BPlot Capabilities (Binary)
900-0014	Audible Beep Control (Binary)
900-0015	Graphics Tablet Display (Binary)
900-0016	Typing Aids (Binary)
900-0017	HP-85 Graphics Print Head Capabilities (Binary)
900-0018	Graphics Cursor (Binary)
900-0019	Polar and Rectangular Coordinate Conversions (Binary)
900-0020	Enhanced String Input, Immediate-Execute Keys, and Cursor Control (Binary)
900-0021	Sorting Groups of Elements of a String (Binary)
900-0022	Storing and Retrieving Programs as Data (Binary)
900-0023	Enhanced CRT, Cursor, and Keyboard Control (Binary)
900-0024	Programmer Control of the Internal CRT and Keyboard (Binary)
900-0025	Teletype Emulator
900-0026	Moon & Stick People
900-0027	MINDOC: A Word Processor
900-0028	HP-41C Bar Code Generation Program
900-0029	Command File Binary (Binary)
900-0030	Fast Sort of a String Vector

Library Program Number	
900-0031	Television Channels US
900-0032	Audio-Visual Synchronizer
900-0033	MULTIP: Marking Multiple Choice Test/Exam Papers
900-0034	Gradebook (+ Histo)
900-0035	Program Expansion Utility
900-0036	Lists BASIC Programs in Expanded Format
900-0037	Variable Name Cross-Reference for BASIC Programs
900-0038	Line Number Cross-Reference for BASIC Programs
900-0039	GENFED: A General Purpose File Editor
900-0040	HP-83/85 Forth (FIG-Forth Model)
900-0041	String Arrays and Fast String Manipulation without Temporary Memory
900-0042	PCOPY
900-0043	Screen-Mode Text Editor
900-0044	Source Comm
900-0045	Readability
900-0046	Character Strings to BREAD
900-0047	Bit-Plotter
900-0048	Alpha-Numeric Sort
900-0049	LIF 85
900-0050	Daytime
900-0051	Creating HP-41C/CV Bar Code Using an HP-7225A Plotter
900-0052	Images-A Poetry Program

INDEX OF APPLICATION PACKAGES

Library Program Number

000 BUSINESS & FINANCE

000-9003	GL85-1 General Ledger Software Package
000-9004	AR85-1 Accounts Receivable
000-9005	Grant and Contract Manager
000-9006	World-Wide Investment System (Real Estate)
000-9007	Real Estate Investment Analysis Pac
000-9009	Accounts Payable - Floppy Disc
000-9010	System General Ledger - Floppy Disc
000-9011	Accounts Receivable - Floppy Disc
000-9012	Inventory Control - Floppy Disc
000-9013	Payroll - Floppy Disc
000-9014	Accounts Payable - Tape Cartridge
000-9015	System General Ledger - Tape Cartridge
000-9016	Balance Forward Accounts Receivable - Tape Cartridge
000-9017	Inventory Control - Tape Cartridge
000-9018	Payroll - Tape Cartridge
000-9019	COSAC: Cost Accounting and Predicting
000-9020	The Accounts Journal: TAJ^{tm} I
000-9021	The Accounts Journal: TAJ^{tm} II
000-9022	NICA 1 Real Estate Analysis
000-9023	NICA 2 Real Estate Analysis
000-9024	Data Flex Payroll
000-9025	Financial Accounting Pac
000-9026	Vendor Files Manager

SERIES 80 SOFTWARE

Users' Library
Software Summary

Catalog No. 000-0001

Software Title: Compound Interest and Loan Amortization

Mainframe(s): HP-83 & HP-85

Software Description:

Solves for any of the five standard compound interest variables: n, i, PMT, PV and FV; with either 3 or 4 knowns. Payments may be either ordinary annuity (END payment) or annuity due (BEGIN payment). Generates loan amortization schedules. Calculates the principal and interest portion of each periodic payment, and the remaining balance after payment has been made. Options include summarizing accumulated principal and interest, and either BEGIN or END payment.

Users' Library
Software Summary

Catalog No. 000-0002

Software Title: Discounted Cash Flow Analysis

Mainframe(s): HP-83 & HP-85

Software Description:

Calculates Internal Rate of Return (IRR), Net Present Value (NPV) and Financial Management Rate of Return (FMRR) for a series of up to 100 unequal cash flows or up to 100 groups of 999 equal cash flows. Performs a scan routine to insure feasibility of the IRR calcualtion and to determine if there are multiple IRR values.

Software Summary

Catalog No. 000-0003

Software Title: Depreciation Schedules

Mainframe(s): HP-83 & HP-85

Software Description:

Generates annual schedules for Straight Line, Sum-of-the-Years' Digits, and variable rate Declining Balance methods. Allows for partial first-year depreciation. Declining Balance method includes crossover to Straight Line depreciation if desired. Presents a graphical representation of the solution for all three depreciation methods.

Software Summary

Catalog No. 000-0004

Software Title: Simple Interest and Interest Conversions

Mainframe(s): HP-83 & HP-85

Software Description:

Solves for any of the four standard simple interest variables: Principal, accrued interest, annual interest rate and days interest accrued.

Converts nominal to effective interest rate, and vice-versa, for periodic and continuous compounding.

Contributors Name: Hewlett-Packard Co.
Address: 1010 NE Circle Blvd.

Users' Library
Software Summary

Catalog No. 000-0009

Software Title: Average Age of Letters

Mainframe(s): HP-83 & HP-85

Software Description:

This program gives you the average age of a group of letters. You can base the average age on the number of calendar days, the number of weekdays or the number of working days between dates. It also tells you how many days between dates for each letter. The working days average takes 10 holidays in 1980 into consideration.

Contributors Name: Margaret Watson

Users' Library
Software Summary

Catalog No. 000-0011

Software Title: Alphabetic Arranging

Mainframe(s): HP-83 & HP-85

Software Description:

This program will re-arrange and print-out words or sentences in alphabetical order. You have the choice of arranging by first letter only, or also by the second letter. It's usefulness lies in the fact that the HP-83 & HP-85 does not handle string arrays.

Software Title: Stock Value and Evaluation Report

Mainframe(s): HP-83 & HP-85

Software Description:

This program determines whether a stock should be invested in and provides a list of the stock's value and price for each period. The investment potential is determined by its growth rate over a period of years before the growth rate slows to 5%. Before this long term growth rate is reached there will be a period of abnormal growth which produces high investment potential.

Software Summary

Catalog No. 000-0054

Software Title: Network Flow Determination

Mainframe(s): HP-83 & HP-85

Software Description:

This program finds the minimum or maximum cost feasible flow through a network. The network is made up of nodes and arcs. Each arc runs from one node to another and can handle flows within a specific range. Each unit of flow along a given arc has an associated cost. The total flow into a node must equal the total flow out of the node. The program will find a set of flows that meets all the demands and either minimizes or maximizes total cost.

Software Title: Two-Dimensional Heat Transfer in a Thin Plate

Mainframe(s): HP-83 & HP-85

Software Description:

This program is designed to determine the temperature at each segment in a flat plate (a two-dimensional array is used) where there is given:

a. Heat input for each segment (BTU/hr thermal energy)
b. Thermal resistance in the plate between each segment ((°F-hr)/BTU)
c. Temperature on one side of the plate such as outdoor temperature (°F)
d. Thermal resistance from each segment to the outdoor temperature ((°F-hr)/BTU)
e. Temperature on the other side of the plate such as indoor temperature (°F)
f. Thermal resistance from each segment to the indoor temperature ((°F-hr)/BTU)
g. Thermal resistance from the edge segments to a temperature adjacent to the plate and assumed to be the average of the indoor and outdoor temperature ((°F-hr)/BTU)

Program output will be the steady state temperature distribution of the plate at each segment.

Software Title: Erection Stresses in Vertical Vessels

Mainframe(s): HP-83 & HP-85

Software Description:

Program will calculate erection loads and stresses in vertical cylindrical stacks or pressure vessels. The program calculates 1-total load, 2-inital pick load, 3-tail load, 4-center of gravity, 5-shear, bending moment, bending stress, allowable bending stress (by modified Donnell's Formula), and the ratio FB/FALB at each section point. 6-also determines moment and stresses at the point of zero shear between the pick points. This program is priced at $12.00 due to the extensive amount of documentation required.

Software Title: Paraxial Ray Tracing

Mainframe(s): HP-83 & HP-85

Software Description:

Traces rays through optical systems having as many as eight refracting surfaces. The program locates principal and focal planes of the system as well as tracing rays through each surface. It can be used to locate the image plane and size of the image for a given object. It will determine the size of the elements used for that condition. If smaller elements are used, one can use this information to gain some knowledge of the throughput of the system.

Software Title: Fast Fourier Transform

Mainframe(s): HP-83 & HP-85

Software Description:

This program calculates a fast Fourier transform from a set of time domain points to a set of frequency domain points.

At the users' option, the inverse fast Fourier transform, calculating the set of time domain points from a set of frequency points, may also be calculated.

The method used is a modification of the basic FFT algorithm. The modified algorithm takes advantage of the fact that series data will be real and space normally reserved for the imaginary part of the complex sequence can be used to calculate a double-length real transform. This is represented for two "N" length transforms as: $Z(n) = X(n) + iY(n) \quad 0 \leq n < N$ data points

The tranform is: $Z(m) = X(m) + iY(m)$ where: $X(m) = \frac{Z(m) + Z(N - m)^*}{2}$ and $Y(m) = \frac{Z(m) - Z(N - m)^*}{2i}$

SERIES 80 SOFTWARE

Users' Library
Software Summary

Catalog No. 200-0003

Software Title: Fourier Series Coefficients for Unequally Spaced Data Points

Mainframe(s): HP-83 & HP-85

Software Description:

This program calculates the Fourier Series coefficients for a function defined by discrete data points $X(I)$, $Y(I)$, $I=1,\ldots,N$-$1.N \leq 300$. The data pairs must be entered such that the $X(I)$ are discrete, but not necessarily equally-spaced, and $X(I) < X(I+1)$ for $I+1,\ldots,N$-$1.N \leq 300$. The finite Fourier series is given by the formula:

$$\frac{a_0}{2} + \sum_{i=1}^{N}\left(a_i \cos\frac{2i\pi x}{T} + b_i \sin\frac{2i\pi x}{T}\right) \text{ where } a_i = \frac{2}{T}\int_{x_1}^{x_1+T} f(x)\cos\frac{2\pi i x}{T}\,dx \text{ for } i = 0,\ldots,N \text{ and } b_i = \frac{2}{T}\int_{x_1}^{x_1+T} f(x)\sin\frac{2\pi i x}{T}\,dx \text{ for } i = 1,\ldots,N$$

T specifies the periods equivalent to $(x_n - x_1)$ and N indicates the number of coefficients desired. The coefficients are evaluated by numerically integrating a parabola passing through three successive points. Execution time depends on the number of coefficients calculated.

Software Summary

Catalog No. 200-0004

Software Title: Fourier Series Coefficients for Equally Spaced Data Points

Mainframe(s): HP-83 & HP-85

Software Description:

This program calculates the Fourier series coefficients A(I) and B(I) of the Fourier series corresponding to a function F(X) which is specified by N discrete equally spaced data points $X(I)$, $Y(I)$, $I=1,\ldots,N \leq 500$.

If: $g(x) = f(x)\cos\left(\frac{2\pi i x}{T}\right)$ and $h(x) = f(x)\sin\left(\frac{2\pi i x}{T}\right)$ then: $a_i \approx \frac{2\Delta x}{3T}\left\{g(x_1) + 4g(x_2) + 2g(x_3) + 4g(x_4) + \ldots + 4g(x_{n-1}) + g(x_n)\right\}$ and

$b_i \approx \frac{2\Delta x}{3T}\left\{h(x_1) + 4h(x_2) + 2h(x_3) + 4h(x_4) + \ldots + 4h(x_{n-1}) + h(x_n)\right\}$ Sine and cosine functional values are computed recursively with the following formula:

$$\sin\left(\frac{2\pi x_1}{\Delta x}(J+1)\right) = \sin\left(\frac{2\pi x_1}{\Delta x}\right)\cos\left(\frac{2\pi x_1}{\Delta x}J\right) + \cos\left(\frac{2\pi x_1}{\Delta x}\right)\sin\left(\frac{2\pi x_1}{\Delta x}J\right)$$

$$\cos\left(\frac{2\pi x_1}{\Delta x}(J+1)\right) = \cos\left(\frac{2\pi x_1}{\Delta x}\right)\cos\left(\frac{2\pi x_1}{\Delta x}J\right) - \sin\left(\frac{2\pi x_1}{\Delta x}\right)\sin\left(\frac{2\pi x_1}{\Delta x}J\right)$$

Software Summary

Catalog No. 200-0006

Software Title: Ordinary Differential Equations

Mainframe(s): HP-83 & HP-85

Software Description:

A fourth-order Runge-Kutta procedure for solving systems of first-order ordinary differential equations. The user must supply the dimension of the system of differential equations (≤3), the beginning and end points of integration, the initial value vector, the maximum number of integration steps, and the user-defined system of equations to be solved.

Runge-Kutta methods attempt to obtain greater accuracy, and at the same time avoid the need for higher derivatives, by evaluating the function F at selected points on each subinterval. For the equation $y' = f(x,y)$, $y(x_n)$ and y_n and step size h, approximations y_n to $y_{(x_n + nh)}$ for $n = 0,1,2\ldots$ are generated using the recursion formula $y_{n+1} = y_n + \frac{1}{6}(k_1 + 2k_2 + 2k_3 + k_4)$ where $k_1 = hf(x_n, y_n)$ $k_2 = hf\left(x_n + \frac{h}{2}, y_n + \frac{1}{2}k_1\right)$ $k_3 = hf\left(x_n + \frac{h}{2}, y_n + \frac{1}{2}k_2\right)$ $k_4 = hf(x_n + h, y_n + k_3)$

SERIES 80 SOFTWARE

Users' Library
Software Summary

Catalog No. 200-0007

Software Title: Integration with Unequally Spaced Data Points

Mainframe(s): HP-83 & HP-85

Software Description:

This program approximates $\int_a^b f(x)d(x)$ where $f(x)$ is represented by discrete function values for unequally spaced domain values x within the interval $[a,b]$. The user is required to input the data points and the tolerance desired. The number of data points must be less than or equal to 300.

The method implemented in this program involves fitting a curve through the data points and integrating that curve. The curve used is the cubic natural spline function which derives its name from a draftsman's mechanical spline. If the spline is considered as a function represented by $s(x)$, the second derivative $s''(x)$ approximates the curvature.

Software Summary

Catalog No. 200-0048

Software
Title: Algebra for Exponentials and Sinusoids

Mainframe(s): HP-83 & HP-85

Software Description:
The keys are used to control operations on expressions which are sums of terms of the form $\exp(-a_j z)\ [C_{1j} \cos(B_j z) + C_{2j} \sin(B_j z)]$.
"Input" (Key #1) puts one term into expression #0. (The expressions are numbered 0 to 9; each may hold up to 20 terms). "Copy" (Key #4) copies an expression. "Output" (Key #2) prints an expression. "Eval" (Key #6) evaluates an expression at a given z and prints the value. "Mulply" (Key #3) multiplies two expressions (puts result into specified place). "Add" (Key #5) adds one expression to another. "Intgr" (Key #7) forms antiderivative of expression. "Deriv" (Key #8) forms derivative.

Software Summary

Catalog No. 200-0049 ✓

Software Title: Quick Plot of REAL Data

Mainframe(s): HP-83 & HP-85

Software Description:

A given data set-read from tape or computed from a user-defined function, can be plotted with a minimum of instructions. Scaling, tic-placement and labeling are automatic. Plot options include: linear or logarithmic scale, either in units or in multiples of π; margins on x-or y-scale; axis placement; specification of an x-or y-section with automatic adjustment of scaling; window. Tics will be placed at "neat" values only, independent of data range, offset or scaling. A hardcopy of any number of screen widths/heights is optional.

Software Title: Ordinary Differential Equations I

Mainframe(s): HP-83 & HP-85

Software Description:

This program solves a system of up to 16 simultaneous first order differential equations by the 4th order Runge-Kutta-Gill algorithm. With user-defined keys, integration limits, initial values, integration step size, and output print interval can be varied. All inputs are explained and prompted. Output includes, in addition to the independent and dependent variables, the intermediate derivatives and a summary of the input variables and integration parameters.

Software Description:

This program tests for differences between two independent or dependent variances. The user has the option of entering the raw data or the actual variances to be tested. In the test for dependent variances, the user must also supply the correlation between the two samples if the raw data is not entered.
If the variances are sample variances, the program converts them to population estimates before testing for differences.
Independent variances are tested by means of the F ratio, while dependent variances are tested by the t ratio.

Software Title: Probabilities of Hitting NRA Metallic Silhouettes

Mainframe(s): HP-83 & HP-85

Software Description:

Given the standard deviation of your bullet pattern, in minutes of angle (which for all practical purposes equals the extreme spread, inches, of your average ten shot group at 25 yards) this program will give the probabilities of hitting each of the four different metallic silhouettes used in the NRA High Power Rifle, NRA Hunters' Pistol, and IHMSA Center Fire Pistol matches, as well as the average probability and score for the 40 shot match. By shooting a few 10 shot groups in your normal match position at 25 yards, you will be able to predict what your scores should be, assuming proper sight-in.

SERIES 80 SOFTWARE

Users' Library
Software Summary

Catalog No. 300-0031

Software Title: One-Way Anova Using Summary Statistics

Mainframe(s): HP-83 & HP-85

Software Description:

This program computes a one-way analysis of variance using only means, standard deviations and number of cases per treatment. This may represent a great savings in time when large numbers of subjects are involved, and sometimes is the only way to do analysis from data presented in journal articles. This program can also be used to check on the accuracy of data presented elsewhere.
The only requirement is that the standard deviations have to be the actual standard deviations for the samples involved. If the standard deviations are estimates of the population standard deviation, the program converts them to sample standard deviations.
The user also has the option of obtaining estimates of strength of association for either the fixed or random effects model on the data.

Software Title: Two-Way Anova Using Summary Statistics

Mainframe(s): HP-83 & HP-85

Software Description:

This program computes a two-way analysis of variance using only means, standard deviations, and a number of subjects per cell. The use of this program may save a considerable amount of time, as compared to programs requiring entry or all the raw scores.
The user has the option of running the fixed, random, or mixed effects model. If the random effects model is chosen, the user has the option to use the pooled mean square error if the interaction effect is found to be zero. Strength of association estimates are also computed for each model.
The only restriction is that the user must specify whether or not the entered standard deviations are sample or population estimates. If they are sample standard deviations, the program transforms them to population estimates before computing the analysis of variance summary table.

Software Title: CRDAOV; Completely Randomized Design Analysis of Variance

Mainframe(s): HP-83 & HP-85

Software Description:

The simplest experimental design is the Completely Randomized Design (CRD). The program CRDAOV will analyze almost any data from this design, for example a factorial treatment design. This is achieved by way of a convenient contrast-specification routine. Output includes the significance levels of certain statistics, and two scatter plots. The first of the latter is a plot of residuals against cell means while the second is an empirical normal plot. These diagrams allow for the recognition of abnormalities in the data being analyzed. NOTE: Several data files are used in the sample run. These data files will be included if the program is purchased recorded.

Software Title: Sidereal Time and Polaris Position

Mainframe(s): HP-83 & HP-85

Software Description:

This program accurately computes local sidereal time and determines the position of Polaris in terms of astronomical coordinates and angular relationship to celestial North Pole. Program plots a star chart of the north polar region, showing Polaris and the constellations Cassiopeia and Ursa Major ("Big Dipper") at the longitude, time and date specified. This chart is particularly useful for alignment of portable telescopes to the celestial pole. Program also yields universal time and Julian date.

Software Title: Wechsler Memory Scale: TRS Estimation

Mainframe(s): HP-83 & HP-85

Software Description:

This program estimates the total raw score of the Wechsler Memory Scale when one subtest is missing. For example, a blind patient will not be able to do visual reproduction subtest. The method used here is to apply weights, derived from multiple regression, to the remaining subtests and add a constant to estimate the TRS. The weights and constants were derived from a sample of 122 non-brain damaged patients.

Software Title: Data Tablet Graphic Input

Mainframe(s): HP-83 & HP-85

Software Description:
This program provides scaled graphic data input to the HP-85 using the SUMMAGRAPHICS Bit Pad One data tablet and 4 button cursor. The user can digitize photographs, drawings, and graphs to a resolution of .005 inch. Any rectangular portion of the 11 by 11 inch tablet may be mapped onto the HP-85 graphic display.
Although not provided, the program is easily extendable to save the measured points in an ARRAY as well as on the display. Thus, arbitrarily complex analysis programs can be driven with graphic data from xrays, journals, topographic maps, projections, hand drawings, etc.

Software Title: Blackjack

Mainframe(s): HP-83 & HP-85

Software Description:
This game of 21 (Blackjack) is designed to be played by as many as 6 players. You may play with up to 4 decks of cards. Bets are made before each deal. The table limit is $500. The cards will then be dealt and each player, in turn, plays his hand.
All winnings and losses will be retained as whole dollar amounts. The cards will be shuffled automatically when necessary and the first card in the shuffled deck will be burned. The remaining number of cards are graphically presented at the top of the display. The last card will not be dealt.

Software Title: Maze Generator

Mainframe(s): HP-83 & HP-85

Software Description:

This program will design and print out a maze which can be up to 44 by 33 units. Each maze is different and has only one path through it.
You may link several mazes of the same dimension in a continuous strip and thereby generate a maze as long as a roll of paper.
The only inputs that you must make are the maze dimensions. After the dimensions are entered, you must wait while the maze is being generated. After the maze is generated, you can choose to copy it or link another maze to it.
The mazes with larger dimensions require significantly more time to generate, but are also much more difficult to solve. If you enjoy finding a path in mazes, this program will generate an endless set of mazes for you to solve.

Software Title: Game of Life

Mainframe(s): HP-83 & HP-85

Software Description:

LIFE is a game of births, deaths and survival.

This idea is to put a pattern of cells on the screen and watch how each generation produces births and deaths according to the following rules:
1. Births occur in an empty cell with exactly 3 neighbors. (A neighbor is an occupied cell in one of the eight adjacent positions).
2. Deaths occur in two ways. A cell will die of overpopulation if it has more than 3 neighbors, or it will die of isolation if it has less than 2 neighbors.
3. Each occupied cell survives to the next generation if it has 2 or 3 neighbors.

Software Title: Hangman

Mainframe(s): HP-83 & HP-85

Software Description:

This is the traditional word guessing game in which you try to guess the word before you get "hung". You have the choice of guessing on the computer's words, or having someone else type in a word for you to guess. You can use a data file stored on tape or enter and store your own set of words. A series of dashes will appear on the screen, one dash for each letter in the word. Only the letters A to Z are permitted in the word. All lower case letters will be converted to upper case letters automatically. If the letter you guessed is in the word, it will be filled in everywhere it occurs. If it is not in the word, part of the body will be drawn. If the whole body is drawn (six errors) before you guess the word, you get "hung" and lose. The correct word will then be displayed.

SERIES 80 SOFTWARE

Users' Library
Software Summary

Catalog No. 800-0011

Software Title: Race Track

Mainframe(s): HP-83 & HP-85

Software Description:

This race game is played on a randomly generated track which goes across the display from left to right. Up to four contestants can participate. Players take turns inputting acceleration changes and direction changes and the machine updates the position of each racer on the display. The position of the racer is checked to be on the track, finished, and also in the oil slick. When a player initially gets close to a randomly positioned oil slick, the slick is plotted on the display. When a player stops in an oil slick, the machine will automatically take the player's turn using the players current velocity and direction. When a player leaves an oil slick, the velocity and direction are randomly changed for the next turn. When a player runs off the track, the velocity and direction are reset to starting conditions. A penalty of lost turns based on the velocity when a player left the course will be imposed. The program computes the maximum values based on a requested change and rejects moves which would cause spin-out or extreme angle changes. All moves are controlled by use of the special function keys.

Software Title: Reversi

Mainframe(s): HP-83 & HP-85

Software Description:

Reversi is a game developed in England in the 1880's. It was quite popular in England, but is relatively unknown today. Various forms of the game have been developed since then, but this computer version is based on the original rules of the game.
The rules for Reversi are quite simple, but the strategies involved in the play of the game can be quite complex. The game is designed for play between two people, one person against the machine, or machine versus machine. After specifying the type of game, you must specify the type of opening, either parallel or diagonal.

SERIES 80 SOFTWARE

Users' Library
Software Summary

Catalog No. 800-0033

Software Title: Morse Code Trainer

Mainframe(s): HP-83 & HP-85

Software Description:

This program uses the built-in tone generator in the HP-85 to send International Morse code at any rate up to 30 words/minute. User text may be sent "straight" or automatically formed into standard 5 letter random code groups. The latter capability provides the ability for the user to drill on any selected subset of the alphabet.

The actual speed is computed for every message--note that the actual speed differs from the desired rate to the extent that the average message character differs from a "standard" character--for example, a message of all E's (coded as 1 dit) will be sent in much shorter time than a message of all Ø's (coded as 5 dahs).

Software Title: Maze-Solving Mouse

Mainframe(s): HP-83 & HP-85

Software Description:

This program incorporates the HP Games Pac MAZE program to generate a maze (max dim 32x24). It then finds the solution to the maze by assuming it is being negotiated by a "blind right-turning mouse". The algorithm has the mouse check to the right of his previous direction (ROM function PDIR) to see if there is a maze wall (ROM function BREAD). If there is no wall, he heads in that direction. If there is a wall, 90° is added to PDIR and he checks again. After negotiating the maze, the mouse has left behind a trail of dots that marks the only solution-the mouse removes his trail if he must retreat from a cul-de-sac.

SERIES 80 SOFTWARE

Users' Library
Software Summary

Catalog No. 800-0037

Software Title: Teaser

Mainframe(s): HP-83 & HP-85

Software Description:

TEASER generates a random pattern of 0's and 1's in a 3x3 matrix, based on a user-supplied seed. By changing one position at a time, the user attempts to generate a pattern as all 1's with a 0 in the center. Each change of a 1 to a 0 changes adjacent cells' contents thus: a) Changing a corner alters the states of the three adjacent positons. b) Changing an edge alters the states of the two adjacent corners. c) Changing the center alters the states of all non-corner locations. In addition, the player can change only 1's to 0's; changing 0's to 1's is disallowed. Keyboard entry of each move is by entering a single digit, 1-9, representing the matrix position analogous to that digit's position on the HP-85's numeric keypad.

Software Title: Storing and Retrieving Programs in Standard Interchange Format (Binary)

Mainframe(s): HP-83 & HP-85

Software Description:

Standard Interchange Format (SIF) is a standard within Hewlett-Packard for formatting programs and data on tape cartridges. This standard format enables you to transfer information to any Hewlett-Packard desktop computer. Included in this program are two binary programs which enable you to store (SAVE) or retrieve (GET) programs in Standard Interchange Format on the Series 80 mainframe.
NOTE: It is necessary to have the equivalent SIF binary programs for the machine you wish to transfer information to.

Users' Library
Software Summary

Catalog No. 900-0009 ✓

Software Title: Converting ROM Statements to Mainframe Statements (Binary)

Mainframe(s): HP-83 & HP-85

Software Description:

Even though the option ROMs duplicate many of the Series 80 mainframe statements, programs developed with a ROM are not the same as programs developed without the ROM. In fact, even though it is not always apparent to the user, the ROM and the mainframe speak two entirely different languages.
The UNTRANSLATE statement in the UNTRAN binary program performs the opposite function of the TRANSLATE command in the ROMs. If a program was written with a ROM plugged into the Series 80 mainframe and one uses the program without a ROM, the UNTRANSLATE statement translates any ROM program statements that are compatible with the mainframe.

Software Summary

Catalog No. 900-0031

Software Title: Television Channels US

Mainframe(s): HP-83 & HP-85

Software Description:

This program defines the frequency band of any of the 82 U.S. Television Channels (2 through 83), computes reference frequencies in any channel, and recalls the principle contours' field strengths and required mileage separations of the band; all based on the channel number entered.

Software Title: Audio-Visual Synchronizer

Mainframe(s): HP-83 & HP-85

Software Description:

This program outputs audio tones and display data to signal operation of three carousel slide projectors. For example, two (upper/lower) may be controlled by a dissolve unit and the third (top) operated independently. The displayed data is event no. (slide change or audio event), carousel position and seconds to next event.

SERIES 80 SOFTWARE

Users' Library
Software Summary

Catalog No. 900-0035

Software Title: Program Expansion Utility

Mainframe(s): HP-83 & HP-85

Software Description:

EXPAND separates multiple instruction statements into individual statements in a BASIC program. The main intent is to provide a more open structure to a program for ease of 'debugging' or modification. Statement logic is preserved. Multiple instructions after IF statements are left intact.

120 T=49 @ H=SQR(X/T3 *.4) @ G=1.2 and 130 J=21 @ PRINT H/J would be stored as:

```
120 T=49
121 H=SQR(X/T3*.4)
122 G=1.2
130 J=21
131 PRINT H/J
```

NOTE: DQTSAV Binary Program (catalog no. 900-0022) is required for this program.

I.D. Code: 10008
Application Code: 000-9003
Expiration Date:

Product Name:	Mainframe(s):
GL85-1 GENERAL LEDGER SOFTWARE PACKAGE	HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

The package maintains financial records for an individual or small business with a maximum of 200 accounts. It runs on the HP-85 without additional memory.

The package is menu-driven; the functions or operations available to the user are displayed on the CRT, and he enters his choice.

There are two data files; the Ledger file, which contains all of the General Ledger accounts with data for the current month, quarter-to-date, year-to-date, the three previous quarters and last year; and the Journal file, which contains the transactions used to update the Ledger file.

As the Ledger file is updated with current transactions, an activity report is printed showing all of the entries made to each account, the beginning balance and the ending balance. The total debits posted and the total credits posted are also accumulated and printed.

The package prints a Balance Sheet and an Income Statement for the month, quarter and year. A report showing the percent change in the Ledger accounts from quarter to quarter and from last year to this year may also be printed.

I.D. Code: 10008
Application Code: 000-9004
Expiration Date:

Product Name:	Mainframe(s):
AR85-1 ACCOUNTS RECEIVABLE	HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

The Accounts Receivable package maintains accounts receivable records for a small business with a maximum of 200 customers. The primary functions of the package are to keep an accurate record of how much money each customer owes and how long the debt has been outstanding. The current accounts receivable balance and net credit sales for the month, quarter, year, and previous year are maintained for each customer. Information pertaining to charges, payments, returns, write-offs, and adjustments is entered at the keyboard and used to update the customer and invoice records.

Reports printed by the package are: Transaction Reports by type and by customer, customer lists by name or by account number, Aged Accounts Receivable, Invoices Outstanding, Accounts Receivable Trial Balance, Customer Statements, Over Credit Limit Report, and Customer Credit Sales Report.

Finance charges, if used, may be entered manually or calculated by the package.

The Accounts Receivable package may be used in conjunction with the General Ledger package to update General Ledger accounts.

Two copies of the program tape are provided.

GRANT AND CONTRACT ACCOUNT MANAGER	HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

This program permits an individual research grantee or contractor or a small research laboratory that is part of a major institution to maintain constant fiscal control over the grant expenditures in each of 10 or more sub-accounts. After a grant or contract identifier and budget are entered, transactions that debit or credit the various sub-accounts may be entered at any time. A print-out of the entered transactions and a summary statement of the remaining funds in each of the sub-accounts is printed out also. Other segments of the menu controlled program permit recovery of any of the files from the cartridge that stores a particular account. A detailed operating manual and a recorded sample account are included. Outputs showing an initial budget and a statement are shown below. An example set of transactions is included under Additional Information.

WORLD-WIDE INVESTMENT SYSTEM (REAL ESTATE)	HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

WORLD-WIDE INVESTMENT SYSTEM
(REAL ESTATE)

Finally, here is a computerized investment system so easy to use and so efficient in its operation that ten minutes is all it takes to learn to get started, and one minute on the average to do one calculation.

This completely mathematically consistent method of price determination is one of the most professional tools for the practice of investment brokerage. It tells an investor what price should be paid for an investment based on his or her investment expectations. The system is also designed to shorten the time required in making investment decisions, and to help in analyzing buying or selling strategies.

The WORLD-WIDE INVESTMENT SYSTEM has the unique distinction of being a deterministic system which does not ask for any resale price (or any rate of increase of the price) in the determination of the price (asking for a price in order to determine a price defeats the purpose of price determination).

Price in this system depends on the expected future investment return and is determined from all the factors affecting the price, that is, from the cash flows plus the cash from resale; resale prices are determined exactly in the same way as the price is determined.

The economics problem of price determination is solved based on rigorous mathematical concepts. And, it seems that when the correct method of solution is used, the investment system actually becomes easier to use. The WORLD-WIDE INVESTMENT SYSTEM is possibly the only system that can appraise investment properties deterministically.

The following is an actual printer output reduced to 50% of the original size.

REAL ESTATE INVESTMENT ANALYSIS PAC	HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

This pac consists of eight programs based on Realtors National Marketing Institute forms:

-Income/Expense Analysis acts as a checklist in developing a projected first year operating statement and determining net operating income.

-Cash Flow Analysis projects the performance of an income property via income, expense, mortgage and tax data. It determines before and after tax cash flows, tax liability, capital gain, sales price and net and initial investment required for a desired return.

-Non-Taxable Entity projects the performance of an income property without considering any tax implications.

-Simple Cash Flow calculates IRR, FMRR and NPV for variable or annuity type cash flows.

-Raw Land Analysis calculates the sales price required to produce a desired yield, both before and after tax, for an unimproved property.

-Lease/Own Analysis provides two approaches in effectively analyzing use of capital.

-Sub-Lease Analysis calculates net present value of a sublessor's leasehold interest given an investor's required yield.

-Exchange Recap functions as a balance sheet for up to a ten-party exchange. It balances equities, determines paper requirements, lists cash and paper in and out, commission and transaction costs and net loan proceeds. Information is listed in a two-column format (has and gets) for each party.

ACCOUNTS PAYABLE - FLOPPY DISC	HP-83/HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

The Accounts Payable software provides a convenient method of generating accounts payable checks while keeping track of the general ledger distribution, month-to-date purchases from each vendor, and year-to-date purchases from each vendor. The system can handle the accounts payable of more than one company by simply storing each company's books on a separate floppy disc.

The Accounts Payable software can accomodate up to 500 vendors in the vendor master file. The software allows the operator to enter up to 1000 pay-distribution records to be entered for each check run. A distribution register is provided which displays the general ledger account number and amount that is distributed to each account. The accounts payable checks are then printed by the computer on continuous checks and the vendor master file is updated. A check register is available to aid in bank reconciliation.

SYSTEM GENERAL LEDGER - FLOPPY DISC	HP-83/HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

The General Ledger software is designed for use by small to medium sized businesses using either cash or accrual accounting methods. The General Ledger system will support multiple companies with each company's data on a separate floppy disc.

The program allows the user to define up to 400 general ledger accounts using any 4-digit account number. The built-in data base will automatically keep the accounts in the proper order. The programs allow up to 4000 line items in journal entries before the general ledger must be updated. This allows journal entries to be accumulated during the month and posted to the general ledger at the end of the month.

The General Ledger software allows a source code to be entered with each journal transaction. When the journal listing is printed, the transactions are grouped and subtotaled by source code. In this manner, a cash receipts journal, cash disbursements journal, expense journal, etc. are provided regardless of the order in which the transactions were entered. A monthly trial balance report is provided in addition to the Profit and Loss Statement and Balance Sheet. These reports may be reprinted as many times as desired. The General Ledger software allows the operator to define all accounts in the chart of accounts. The retained earnings account number is not fixed as it is in many general ledger programs.

ACCOUNTS RECEIVABLE - FLOPPY DISC	HP-83/HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

The balance forward accounts receivable program can accomodate 500 customers. Each system will support multiple companies with each company's books on a separate floppy disc.

The Accounts Receivable software allows the entry of invoices, credit and debit memos, and receipts. The system provides journals for each of these input sources before they are posted to the customer accounts. At any time during the month the user may display all current account activity along with the current amount due. The system generates a statement for each account at the end of the month. The transaction file is cleared after the statements have been printed. The system can accomodate up to 5000 transactions per month. Each customer is assigned a three digit account number by the operator. The internal data base keeps the accounts sorted into ascending order and available to the accounts receivable system automatically.

INVENTORY CONTROL - FLOPPY DISC	HP-83/HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

The Inventory Control software can track up to 1500 inventory items per disc. The programs maintain the item number, description, price, cost, warehouse location, reorder point, quantity on hand, date of last purchase, period-to-date sales activity, and year-to-date sales activity. Since the programs allow more than one floppy disc to be used, an infinite number of inventory items may be maintained if multiple discs are used. The programs allow the operator to recall any inventory item to the CRT screen so that the data may be reviewed. Reports such as an inventory receiving journal, inventory sold journal, inventory reorder listing, and sales activity report are available on demand.

The Inventory Control software allows inventory items of up to 10 alpha-numeric characters to be assigned to each item. The item description may be up to 25 characters in length.

SERIES 80 SOFTWARE

HP USE ONLY
I.D. Code 10028
Application Code: 000-9013
Expiration Date:

Product Name:	Mainframe(s):
PAYROLL - FLOPPY DISC	HP-83/HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

The Payroll software will allow up to 200 employees per year to be processed. The software generates quarterly and yearly reports required for government reporting. The system is capable of supporting more than one company by simply using a separate floppy disc for each company.

The payroll system allows the operator to assign three-digit account numbers to each employee for identification. The programs automatically keep track of the employees using the built-in data base programs.

The Payroll software can handle both computer-generated, manual, and voided checks. The programs allow the entry of up to 1600 individual employee timesheets. These timesheets are grouped by employee during the edit register printing so that only one automatic check is produced for each employee. The programs then produce the employee payroll checks on continuous form checks and update the employee master files. These employee master files are used to print the end-of-quarter reports, and end-of-year reports. The W-2 forms are also printed on continuous forms.

COSAC: Cost Accounting and Predicting	HP-83/HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

COSAC is a powerful job costing and predicting program applicable to manufacturing, engineering, contracting, service organizations, and generally anyone needing to follow costs on a job-by-job basis.

Overview Reports Presents - on a minimum amount of paper - the current position relative to budget of all jobs as well as completion percentage and production units (hours, drawings, gallons, widgets, etc.) expended.

Productivity Reports Shows the billable vs. non-billable activity of all of your people and machines. Data is presented in dollars and percent.

Cost Detail sheets Indicates the current financial status of each job. They tell you:

- Accumulated cost of each job.
- Cost relative to job's budget.
- Average Cost per production hour.
- Ratio of billable amount to production cost.
- Prediction of time and resources remaining to complete job on budget.
- Cost developed during current accounting period for each job.
- Projected overrun or underrun in dollars and percent.
- Average cost per production unit (user definable).

Other Reports Includes job lists, cost category lists, employee lists.

Vertically Compatible With our accounting system (available 4th quarter 1981) which is an order invoicing type system that handles work in progress and accounts receivable.

COSAC Handles 144 different jobs, 99 different employees and/or machines, and 20 different cost categories. User can insert a cost for each category, each entry, or allow the machine to default to a user defined value.

Available now.

Product Name:	Mainframe(s):
THE ACCOUNTS JOURNAL™: TAJ™I	HP-83/HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

TAJ™ is completely INTEGRATED. All journals are automatically updated at the instant a transaction is posted. **TAJ™** responds to English commands, too- no more confusing "menus" and codes. You enter a simple English command and **TAJ™** does what it is told. For example, to get a list of your customers you simply type the command "LIST CUSTOMERS". Further, disregard any reservations about the size of the HP Series 80 CRT. Since **TAJ™** simply asks for a "COMMAND:", and you, as the operator, simply type a one line instruction onto the CRT (such as "LIST CUSTOMERS"), screen size becomes irrelevent.. **TAJ™** only needs one line !!!

1 Accounts Receivable
- Aged Receivable Report
- Itemized Transactions
- Six Digit Invoice Numbers
- Customer Edit and Review

2 Accounts Payable
- Aged Payable Report
- Vendor Edit and Review
- Itemized Vendor Transactions
- Automatic Vendor Numbers

3 General Ledger
- Transactions Report
- Trial Balance
- Audit Trail
- MTD and YTD Balance
- Financial Reports

4 Payroll
- MTD,QTD,YTD Data
- Quarterly Reports
- Multiple Pay Period
- Salaried or Hourly

THE ACCOUNTS JOURNAL™: TAJ™ II	HP-83/HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

Integrated Accounting for ENGINEERS. **TAJ™ II** operates with the same simplicity as **TAJ™ I. TAJ™ II** has a different kind of payroll. **TAJ™ II** has Job Costing that allows the Engineer to specify not only how many hours each employee worked, but on which jobs. **TAJ™ II**'s Job Costing also allows the Engineer to break down this time further into "Cost Centers" (i.e. Surveying, Structural Design, Mapping, etc.). Your own job numbers (six digits) can be assigned to each job. Vacation time requirements for union employees is also taken care of automatically. In addition to these, and the standard Payroll features of **TAJ™ I**, **TAJ™ II** also includes:

1 Accounts Receivable
- Aged Receivable Report
- Itemized Transactions
- Six Digit Invoice Numbers
- Customer Edit and Review

2 Accounts Payable
- Aged Payable Report
- Vendor Edit and Review
- Itemized Vendor Transactions

NICA 1 REAL ESTATE ANALYSIS	HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

This program is a simple analytical tool for use by real estate professionals and investors alike. Given thirty three independent data inputs it produces mortgage details, cash flow and income statements for five years, a summary of after tax cash flows, I.R.R. computations, and a sales summary showing capital gains tax payments including recapture tax (if accelerated depreciation is used).

Provision is also made for entering corporate name, client name, date, and for changing variables and individual numbering of each run of a report where a variable is altered.

HP USE ONLY
I.D. Code: 10046
Application Code: 000-9023
Expiration Date:

Product Name:	Mainframe(s):
NICA 2 REAL ESTATE ANALYSIS	HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

This program is a simple analytical tool for use by real estate professionals and investors alike. Given thirty three independent data inputs, it produces mortgage details, cash flow and income statements for ten years, a summary of after tax cash flows, I.R.R. computations, F.M.R.R. (with safe rate and appropriate rate), and a sales summary showing capital gains tax payments including recapture tax (if accelerated depreciation is used). Cross over to straight line from accelerated depreciation is automatic, ballooning of first mortgage is optional.

Provision is also made for entering corporate name, client name, date, and for changing variables and individual numbering of each run of a report where a variable is altered.

The new tax laws (August, 1981), incorporated "A.C.R.S." This is now an option built into the Nica 2 menu. The summary of sales includes revised tax computations if this option is selected.

Product Name:	Mainframe(s):
Financial Accounting Pac	HP-83 & HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

The Financial Accounting Pac is a system of fully interactive programs that provide a General Ledger, General Ledger Detail by account, General Journal, Balance Sheet, Income Statement, Accounts Payable Journal, Accounts Payable Subsidiary Ledger, Accounts Receivable Journal, Accounts Receivable Subsidiary Ledger, Accounts Payable Aging, Accounts Receivable Aging as well as "on line" customer and vendor account information.

The financial accounting system will take full advantage of the HP-83 & HP-85 Autostart feature. All programs are controlled by a master menu, and all functions are controlled by "softkeys". A first-time user can easily set up general ledger, customer and vendor accounts by following computer prompts. Data files for a particular business are kept on a single disc. The accounts payable and accounts receivable subsidiary ledgers will allow up to 500 open invoices at one time. In addition, a "Query" function allows the user to view customer or vendor account information at any time. The invoice records include both outstanding balance and original invoice balance in order to easily keep abreast of partial payments. Overpayments and customer deposits on sales or company deposits on sales or company deposits on purchases are easily handled. Reports include accounts receivable aging, accounts payable aging, vendors and open invoices, customers and open invoices, customer accounts and vendor accounts.

The Financial Accounting Pac allows the generation of a trial balance, income statement (profit and loss), general ledger detail, general journal, account payable and account receivable report, etc. at any time. Month end and year end updates are performed by two separate programs to reduce the chance of unintentional updates by novice operators. The user selects the names for the general ledger accounts. The accounting system is designed for an office environment, and inexperienced operators. All entries to the program are checked for "reasonableness" in an effort to screen out inappropriate entries. All transactions are recorded and may be printed at any time in order to check entries.

The Financial Accounting Pac will allow 300 customer and 300 vendor accounts. The general journal will hold 2,000 transactions before the user must perform an update.

VENDOR FILES MANAGER	HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

You can maintain a directory of 40 vendors, each keyed to a file that contains pertinent information on invoices paid to them. Each vendor's invoice file records the invoice date, one of 26 account codes to indicate the account that paid it, a 15 character descriptor of the invoice content, and the amount paid. When a vendor invoice file is printed, the total amount paid to that vendor is also calculated and printed. Each vendor file can accomodate up to 100 invoices. The vendor directory, the master program, and the 40 vendor files fill one cartridge.

This program is a useful complement to our Accounts Manager (program number 000-90005), especially when more than a single source account is maintained.

CRIBS - Client Record Index and Billing System	HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

CRIBS performs four major functions: recording of client case information, selective retrieval of this information, billing for all activities recorded, and posting of bills and payments for entry in the firm's own accounting system. In addition, the firm can enter a table of standardized rate codes for use in billing, can assign passwords to its personnel for security, and can use access codes to restrict the use of certain functions and the accessibility of certain information.

There is no limit on the number of clients that CRIBS can handle, since each client's records are maintained on a separate tape cartridge. There is also no limit to the amount of information that can be recorded for each client, since each tape will hold up to 400 entries and any number of continuation tapes may be used for each client.

CRIBS is menu driven (presenting the user with a list of the functions or subfunctions available to him) and it prompts the user to enter all required information, so no memorization and virtually no training is needed to use the system.

CRIBS is intended to provide complete summaries of all actions performed for clients and an index of the contents of client files, as well as more complete timekeeping and more flexible billing than is presently available to most firms. Because of the low cost of the CRIBS system in comparison to other law office systems and because CRIBS does not require a trained operator, it is affordable for even the very small law firm.

REAL ESTATE FINANCE	Series 80

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

The Real Estate Finance Pac has been designed to provide the user with immediate solutions to the analysis of various financing instruments and investment alternatives. The pac contains eight programs:

-Wraparound Mortgage calculates yield to the contract vendor and/or lender of a wraparound mortgage. Given data on existing mortgages, the lender/vendor's desired yield and the wrap data, the program will determine IRR and suggest precise adjustments to PV, PMT or FV in order to achieve the desired yield.

-Graduated Payment Mortgage computes the schedule of payments necessary to amortize a graduated payment mortgage given the mortgage term, rate and loan amount, when the graduations occur and the percentage increase.

-Variable Payment Financing enables the user to incorporate many levels of payments (including partial balloon payments) into a loan payment schedule and allows the user to solve for final payment, number of payments or balance.

-Lender Participation enables the user to quickly determine cash flows and yield to the lender in a participation financing situation.

-Alternative Investments/FMRR Analysis provides the user with a method of adjusting investments in which there is a disparity in initial investments and/or holding periods; determines IRR, adjusted FMRR and Accumulated Wealth for each investment.

-Amortization and Constant Principal Schedules generates schedules for amortized (equal payment) and constant principal payment loans.

SERIES 80 SOFTWARE

HEWLETT-PACKARD
SOFTWARE SUMMARY

Catalog No.

Software Title: Financial Decisions Application Pac	Mainframe(s): HP-83/85

Software Description: The Financial Decisions Pac can be used with the Series 80 Computer to evaluate a wide variety of financial alternatives. Included in the pac are program descriptions, user instructions, and example problems. All programs contain HELP sections which provide handy key definition references, and either special GUIDE keys, or a set of program guidelines which will explain unique or potentially difficult concepts in specific sections. The pac also includes a section explaining the basic concepts of cash flow.

There are eight programs in the Financial Decisions Application Pac:

- Compound Interest & Loan Amortization, solves for any of the five standard compound variables and generates loan amortization schedules.
- Discounted Cash Flow Analysis calculates IRR, NPV and FMRR.
- Depreciation generates annual schedules for straignt line, sum-of-the-years'-digits and variable rate declining balance depreciation methods with a graphics option.
- Simple Interest and Interest Conversions, given any three of the four standard interest variables, solves for the fourth.
- Bonds and Notes computes price or yield for bonds and notes.
- Break-Even Analysis solves for any of the five variables in a break-even analysis, given the other four, with a graphics option.
- Odd Days Interest computes the APR and the payment amounts for single advance regular payment transactions.

With the Financial Decisions Pac, user knowledge of computer programming is unnecessary. The programs are complete, friendly and well documented, allowing the user to concentrate on financial analysis rather than programming.

Software Title: Linear Programming Application Pac	Mainframe(s): HP-83/85

Software Description: The Linear Programming Pac provides a simple and convenient means of optimizing linear programming models. It has been designed for use in many different industries because the format of the input and output has not been tailored or structured for any particular application.

The maximum problem size the LP Pac can handle depends on how much read/write memory (RAM) is available. Two versions of the program are recorded on both tape cartridge and disc. The first requires 16K bytes of RAM; the second, 32K bytes.

The print section of the program allows the user to print the data on a printer. The printout can be used as a check on the data entered or as a hard-copy record of the problem. If errors have been made during problem entry, the modify routine provides a simple way to make corrections. It also allows the user to create essentially new problems by adding or deleting constraints from a previously created problem.

The solve routine performs the optimization using a modified simplex method, then prints the solution and, if desired, a sensitivity analysis. The tableau, which is used to provide a beginning solution in optimizing the problem, will show not only the variables which have been entered, but also the slack, surplus, and artificial variables. The system automatically computes these variables in order to convert the inequalities to equalities. After the optimization, the system will automatically print out the basis and solution variables, including the dual variables, and indicate both the value of the objective function and the number of iterations required.

Finally, the LP system will provide a sensitivity analysis to determine the range for variables to stay in or out of the basis. The system also provides the critical level of the constraint values.

SERIES 80 SOFTWARE

HEWLETT-PACKARD
SOFTWARE SUMMARY

Catalog No.

Software Title: Graphics Presentations Application Pac	Mainframe(s): HP-83/85

Software Description: Text and charts for professional quality reports and presentations can be generated quickly and easily, on acetate or paper, using the Series 80 Graphics Presentations Pac. In addition to the normal plotter character style, the Graphics Presentations Pac provides: Roman and smooth character styles; Upright or slanted variable letter sizes; Four colors; and Six hatching techniques.

After creating a few slides and charts with the manual as a reference, the user will be able to proceed by following the instructions and messages contained in the program. The slide creation section of the manual shows many detailed examples of slides from start to finish. In addition to the creation of slides, the examples also cover some of the editing features and storage capability built into the pac.

The Graphics Presentations Pac has the following features and capabilities:

-Text Mode: 9 letter sizes; 3 type styles which can be either upright or slanted; 4 pen colors; 3 alternative highlighting capabilities (centered, underlined, both) in addition to no highlights; several special characters including many Greek letters and European characters.

-Pie Charts: One or two pies; 2 to 25 slices per pie (each slice can be exploded independently); 6 hatching types; 4 pen colors; 15-character upright or slanted labels; optional percentage labeling; 32-character title and subtitle(s).

-Bar Charts: Normal, clustered, or stacked bars; 1 to 25 bars (clusters); 6 hatching types; 4 pen colors; upright or slanted axes labels; 32-character title and subtitle(s).

-Line Charts: 2 to 25 points; 6 line types; 4 pen colors; upright or slanted axes labels; 32-character title and subtitle(s).

SERIES 80 SOFTWARE

HEWLETT-PACKARD
SOFTWARE SUMMARY

Catalog No.

Software Title: VisiCalc™PLUS Application Pac	Mainframe(s): HP-83/85

Software Description: VisiCalcPLUS is a powerful software tool for analysis and solution of complex business and scientific problems. In business, VisiCalcPLUS can become a balance sheet for doing what-if planning. For the engineer, VisiCalcPLUS can simplify the creation of a process model or aid in statistical analysis.

With VisiCalcPLUS, a Series 80 display screen becomes a window that looks upon a much larger electronic worksheet. The user can use the cursor keys to move or scroll this window in four directions to look at any part of the worksheet.

The worksheet is organized in rows and columns. Rows are designated by numbers, columns by letters; the intersection of each row and column defines an entry position, or cell. Alphabetic titles, numbers, or formulas can be entered in each cell. The formula can contain references to the contents of other cells, so that whenever a cell value is changed, all cells depending on that value are automatically changed. Each time an entry is made, VisiCalcPLUS automatically recalculates all formulas on the worksheet.

The VisiCalc portion of this pac is enhanced by the addition of the PLUS portion of VisiCalcPLUS. This is a group of four BASIC language graphics programs that use data files created within VisiCalc to generate line, bar, and pie charts. One of these programs also tests sets of data for goodness of fit to a linear regression and three other transformed linear curves.

The selected graphics program reads the data in from a tape or disc, allows the user to specify titles and format, and outputs the graph to the CRT or to a plotter such as the HP 7225.

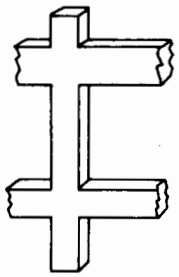
Product Name:	Mainframe(s):
85/CD-2 Reinforced Concrete Column Design	HP-85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

85/CD-2
REINFORCED CONCRETE COLUMN DESIGN



Designs or checks the capacity of a reinforced concrete column in accordance with ACI 318-77 with bending in either or both directions. Slenderness effects are evaluated according to the moment magnification method in accordance with Section 10.11 of the ACI Code. Slenderness ratio limited to 100 or less. Cross-sections include rectangular (tied), round (spiral or tied), and square with circular bar arrangement (spiral or tied). No provision has been made for lateral loads applied between ends.

Input	**Output**
Material Properties	Reinforcement Data
Design Method	Allowable Load and Moment
Loads and Moments	Moment Magnification Factor
Unsupported Length	Spiral Size and Pitch
Cross-Section	Eccentricities
Effective Length

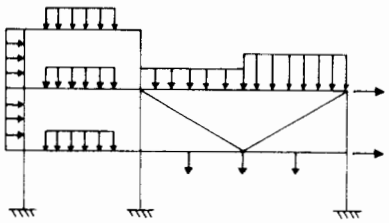
85/FA-3 Plane Frame and Truss Analysis	HP-85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific detaiis, major features and benefits, etc.)

85/FA-3
PLANE FRAME AND TRUSS ANALYSIS



Determines critical moments, shears, axial loads, and the displacements at all joints for a plane frame of any configuration. Initial axial displacements are allowed in order to evaluate the effects of settlements, member shrinkage, or member temperature change. Members may have variable section. Members may have uniform (full or partial length) or concentrated loads.

Input
- Frame Geometry
- Support Conditions
- Member Properties
- Loads and Axial Initial Displacements
- Load Combinations

Output
- Joint Displacements and Rotations
- Member Forces and Reactions
- Maximum Moments

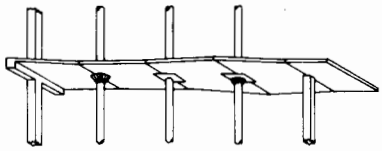
PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific detaiis, major features and benefits, etc.)

85/CD-3

FLAT SLAB ANALYSIS AND DESIGN



Analyzes and designs flat slab or waffle slab floors in accordance with ACI 318-77. Flat slabs may have drop panels at columns. Columns may have capitals. Either the ultimate strength or the working stress method may be used. Design is for a one-bay wide strip using the equivalent frame analysis method and may be up to 10 spans. The strip may have cantilevers. No beams parallel to the direction of moments are permitted.

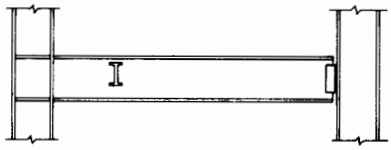
I.D. Code: 10001
Application Code: 100-9004
Expiration Date:

Product Name:	Mainframe(s):
85/SD-1 Steel Beam Design	HP-85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific detaiis, major features and benefits, etc.)

85/SD-1
STEEL BEAM DESIGN



Designs or checks steel W, S and C sections subjected to loads and end moments. The program selects the lightest sections for each of several section depths. A check routine allows the designer an opportunity to check a section. The ratio of the actual working load shear stress to the AISC allowable shear stress is also calculated. Solutions do not include biaxial bending problems. The program includes data files for W6 through W36 sections as listed in the AISC Steel Construction Manual.

Input
- Loads and End Moments
- Material Properties
- Bracing Points
- Section Type
- Nominal Depth

Output
- Lightest Section
- Moment Capacity
- Shear Stress Ratio
- End Reactions
- Maximum Moments
- Centerline and Cantilever Deflections

CHEMICAL ENGINEERING PAC 1	HP-85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

This package is designed to solve many of the more time consuming problems which come up in the design or troubleshooting of a chemical plant. The programs included are:

FLUID FLOW ANALYSIS - Solves interchangeably for pressure drop, flow rate, or pipe diameter in a variety of units - both English and Metric. Allows for consideration of fittings and valves.

EQUATIONS OF STATE - Provides both the ideal gas and Redlich-Kwong equations of state.

DEW POINT AND BUBBLE POINT CALCULATIONS - Determines the equilibrium temperature for a mixture of up to 25 components in an ideal mixture.

ISOTHERMAL FLASH CALCULATION - Calculates the mole fraction of the feed vaporized and the resulting liquid and vapor composition for ideal solutions.

ADIABATIC FLASH CALCULATION - Calculates the mole fraction of the feed vaporized, the equilibrium temperature, and product compositions for ideal solutions.

PACKED COLUMN ANALYSIS - Determines the required packed column diameter such that the gas velocity will be 50% of flooding.

McCABE THIELE ANALYSIS - Solves interchangeably for number of stripping and rectification trays, mole fraction low boiler in the feed, mole fraction low boiler in the distillate, mole fraction low boiler in the bottoms, thermal condition of the feed, reflux ratio, and average Murphree tray efficiency.

SIMULTANEOUS NON-LINEAR EQUATIONS - Uses a Newton-Raphson convergence scheme to solve a system of up to 12 equations with 16K memory and up to 20 equations with 32K.

Retail Price: $295

COGO (COORDINATE GEOMETRY) SYSTEM - TAPE CARTRIDGE	85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

The COGO system software package contains four sets of programs designed to aid the surveyor in solving major surveying problems. The program routines for field traversing include Bowditch and Crandall's traverse adjustment, elevation adjustment, and radial staking notes. Subdivision routines include intersect bearing-bearing, bearing-distance, distance-distance, curve data calculations, dividing arcs and lines, and intersecting offset lines.

The COGO system software also includes graphics plotting and more advanced routines such as cul-de-sacs, curve staking, spiral curve, true least squares traverse adjustment, double proportional measurement, and state plane transformations.

COGO has a capacity of 4000 x,y,z coordinates per set when equipped with 32K of memory.

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

The Bluetopping System software package is a set of programs designed for the civil engineer who calculates Bluetop Grade Lines. The program will compute station and elevation data for equal tangent parabolic vertical curves and straight grades. These stations may be on a (straight grade) tangent or on a curve. Additional features include special street functions, such as the calculation of Gutter Left/Right, and Edge of Pavement Left/Right. Upon completion of data entry the operator may obtain a fully annotated listing for all or any portion of grade lines by inputting a beginning station, on-tangent station interval, on-curve station interval, and ending station. The annotation includes notations for VPC, VPI, VPT, Sag, Summit, Plus, and On-Tangent.

The system software is a menu-driven system which operates in both interactive and batch input modes. The system will handle 150 VPT's (station, elevation, length for each VPI or 50 for each of the three grade lines) and 50 random plus stations when equipped with 32K of memory.

EARTHWORK SYSTEM - TAPE CARTRIDGE	85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

The Earthwork system software package is a set of programs designed for the civil engineer who calculatesand plots earthwork volumes and mass diagram by the average end method. The system computes earthwork volumes, allowing the designer to obtain a cost-effective highway design.

The system software is a menu-driven system which operates in a batch data mode. The data is inputted via data lines in one of the batch data programs. The batch data input format eliminates the need for computer prompting, an important feature due to the quantity of input data inherent in earthwork computations. The batch data programs and data lines may be saved, eliminating need for re-entry of dry data. The operator need only select those lines requiring revision and then rerun the data for updated calculations.
The Earthwork System requires 32K of memory.

HARDY CROSS II - TAPE CARTRIDGE	85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

The Hardy Cross II System software package is a set of programs designed for the civil engineer who calculates hydraulic system parameters while in a steady state. These hydraulic systems may consist of multiple element networks that are interconnected at junctions. These elements may be pipes, pumps, and imaginary elements used to provide psuedo loops in multiple-reservoir systems. The user may use the equivalent length method to account for minor losses. The user must have the pump flow direction correct in these calculations.

The Hardy Cross II system is a menu-driven system which will operate in both interactive and batch input modes. The system will handle 250 elements (pipes, pumps, psuedo elements), 250 loop elements, and 250 junctions when equipped with 32K of memory.

μ - PAC (MICRO PACK)	HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

MICROWAVE CIRCUIT ANALYSIS AND OPTIMIZATION WITH GRAPHICS

μ - PAC PROGRAM DESCRIPTION

μ-PAC is a sophisticated microwave two-port analysis and optimization program designed specifically for use on the HP-85 microcomputer. Ease of circuit description and use was a foremost consideration in its developemnt. A free-formatted input with optional element-value scaling (pf, nhy, k, etc.) and multiple menu options makes this program extremely practical to learn. Interconnections are easily performed using descriptive symbols in a convenient and natural manner. Results of any analysis may be permanently stored or displayed as s-parameter, y-parameter, or z-parameter data. A data processing menu analyzes the results of any analysis for associated parameters such as stability, maximum gains, simultaneous conjugate match, etc. A graphics menu allows plotting of the parameters on linear, logarithmic, polar, or Smith charts. The results of many different circuit analyses may be plotted for comparison purposes. Finally, μ-PAC offers a modified Taylor optimization search which may optimize as many as 10 variables. The results of an optimization may also be analyzed and displayed graphically. During the optimization process, gradients and search sequences are displayed. The user has the option of stopping any process and using current optimized results in any menu option. Measured data (s-parameters) may be interpolated or smoothed to create additional data or eliminate errors. Data banks may be created to characterize devices for use in circuit files. Gain and stability may be plotted on the Smith chart for modeled or measured devices.

This program has been created as a tool for microwave circuit designers. The circuit element library is expandable as additional libraries are in development.

TRANSIENT RESPONSE	HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

Analyze the transient response of a linear system expressed by the polynomial:

$$G(S) = \frac{E_o(S)}{E_i(S)} = \frac{A_0 + A_1S + A_2S^2 + \ldots + A_mS^m}{B_0 + B_1S + B_2S^2 + \ldots + B_nS^n}$$

where: $n \geq m$
$S = j\omega$

FEATURES:

- Up to 10^{th} order systems
- Analyze D/A converters, RLC networks, photodiode amplifiers, active filters
- Prestored routines to analyze current amplifiers, integrators, coil drivers and more
- Determine mechanical system response using prestored routines
- Simplified data entry using easy to read component names, multipliers

OUTPUTS:

- Graphic / Tabular output
- Response computed for impulse, ramp, step, sawtooth inputs

For two pole step response:

* Damping Factor
* Damped Oscillation Freq
* Damped Oscillation Period
* Percent Overshoot
* Time at Maximum Overshoot
* Time at First Axis Crossing
* 10% - 90% Risetime
* Settling Time
* Magnitude vs. Frequency
* Phase vs. Frequency

Analysis and Design of Digital Filters and Discrete-Time Systems	HP-85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific detaiis, major features and benefits, etc.)

This newly-announced applications PAK for the HP-85 is a menu-oriented, prompt-driven, interactive program for analyzing and designing digital filters and discrete-time systems. The PAK provides the following design options:

(i) automated design of finite impulse response (FIR) digital filters to meet frequency domain specifications,
(ii) automated design of infinite impulse response (IIR) digital filters of the Butterworth and Tchebyshev variety to meet frequency domain specifications,
(iii) design of FIR filters to meet frequency sampling specifications,
(iv) least squares design of FIR filters, and
(v) transformation of analog systems to digital systems by the methods of impulse invariance, covariance-invariance, and bilinear-z transformation.

Once designed these filters may be analyzed by computing, tabulating, and graphing (on CRT, thermal printer, or HP7225 plotter) the following data:

(i) filter coefficitents,
(ii) filter impulse response, and
(iii) filter frequency reaponse (magnitude and phase; linear or log scale; analog and digital overplot).

Filter coefficients may be rounded to a desired number of significant digits and re-analyzed.

This application PAK provides the following purely analysis features:

(i) impulse reaponse and frequency response analysis for user-specified autoregressive moving average (ARMA) discrete-time systems, and
(ii) fast Fourier transofrm (FFT) analysis of user-specified real (and complex) sequences of length 256 (128) points.

Fluid Flow Analysis

Mainframe(s):

HP-85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

This program allows the user to solve those time-consuming fluid flow problems with very little effort. It is quick, accurate, and extremely easy to use.

Sove interchangeably for:

* Flow rate
* Pressure drop
* Pipe diameter

The user may select to calculate in a wide variety of units - both English and Metric.

The calculations apply to laminar, transitional, and turbulent flow.

Common values of pipe roughness are program prompted and number of velocity heads (K-values) are printed on request.

After the initial calculation, new cases may be examined without reentering unchanged parameters.

```
        FLUID FLOW ANALYSIS
        ********************

            Flow Parameters

Mass Flow (lb/hr) = 275000
Velocity (ft/sec) = 7.8366
Press. drop (Psi) = 11.5
Reynolds no. = 322730
Friction factor = .017202

          Physical Properties

Density (lb/cu.ft.) = 62.32
Viscosity (cP) = 1.005

            Pipe Properties

Length (ft.) = 450
Diameter (in.) = 5.3552
Sum of K's = 10.5
Pipe roughness, E (in.) = .0018
```

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

Solves interchangeably for:

* pressure, P
* volume, V
* number of moles, n
* gas constant, R
* temperature, T

The user may select either the ideal gas or Redlich-Kwong equation of state.

The Redlich-Kwong solution requires both the critical temperature and critical pressure.

Values of the universal gas constant are provided in the manual along with critical properties of 45 common substances.

```
      IDEAL GAS EQUATION

      Pressure = 5
Volume will be calculated
      No. of moles = 1
      Gas constant = .7302
      Temperature = 520

Ideal gas volume = 75.9408
```

```
      REDLICH-KWONG EQUATION

      Pressure = 5
Volume will be calculated
      No. of moles = 1
      Gas constant = .7302
      Temperature = 520
Critical Temperature = 665.9
Critical Pressure = 42

Redlich-Kwong Volume =
 69.3051733722
```

Product Name: ***Dew Point and Bubble Point Calculations***

Mainframe(s):

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific detaiis, major features and benefits, etc.)

This program performs the necessary trial and error calculations to determine the equilibrium temperature for an ideal solution of up to 25 components.

First, starting on line 5000, the user types in the equilibrium ratio between phases (K_i) for each component as a function of temperature.

Next, the user is prompted for:

* the type of calculation (dew point or bubble point)
* the vapor or liquid composition
* a first guess for the dew point or bubble point temperature.

Calculations then begin with the results of each interation displayed.

```
DEW POINT CALCULATION
**********************

   Y(1) = .0114
   Y(2) = .9147
   Y(3) = .0537
   Y(4) = .0202

GUESS FOR DEW PT. TEMP. = 200

CALC. DEW POINT TEMP. = 238.19
```

```

Isothermal Flash Calculation

Mainframe(s):
HP-85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

This program calculates the mole fraction of the feed vaporized (V/F) and the resulting liquid and vapor product compositions.

A second order Newton-Raphson convergence scheme is used to converge the Rachford-Rice equation to less than 10^{-6}.

The user is prompted for:

* the number of components, n
* the mole fraction of each component in the feed, z_i
* the equilibrium ratio between phases, K_i, for each component at the flashing temperature.

Adiabatic Flash Calculation

Mainframe(s):

HP-85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

This program calculates the mole fraction of the feed vaporized (V/F), the equilibrium temperature, and the resulting liquid and vapor product compositions for a flash process in which no heat is added to the system.

First, starting on line 5000, the user types in:

* the equilibrium ratio between phases, K_i, as a function of temperature for each component.
* the liquid enthalpy, h_i, as a function of temperature for each component.
* the vapor enthalpy, H_i, as a function of temperature for each component.

Next, the user is prompted for:

* the feed composition
* the feed enthalpy
* a first quess for the equilibrium temperature

The results of each iteration of the simultaneous material and energy balance convergence process are displayed.

```
ISENTHALPIC FLASH CALCULATION

Product Name:

Packed Column Analysis

Mainframe(s):

HP-85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

Calculates packed column diameter and flooding velocities for gas-liquid systems.

The user is prompted for:

* the packing fractional void space
* the packing specific surface area, ft /ft
* the mass flow rate of the gas, lb/hr
* the gas density, lb/ft
* the superficial liquid flow rate, lb/hr ft
* the liquid density, lb/ft
* the liquid viscosity, centipoise

The program then uses a second order Newton-Raphson convergence scheme to solve the Sherwood-Shipley-Holloway equation for superficial gas flooding rate.

The column diameter is then calculated such that the gas velocity will be 50% of flooding.

```
        PACKED COLUMN ANALYSIS
-------------------------------

        Packing properties

Specific surface area
   (sq.ft/cu.ft) =          51.000
Fraction of free void space in
packing (decimal) =           .683

        Gas properties

Weight flow rate of gas
      (lb/hr)  =             461
Density of gas
    (lb/cu.ft) =           .0497

        Liquid properties

Superfical liquid rate
   (lb/hr-sq.ft) =            3300
Density of liquid
      (lb/cu.ft) =       62.3000
Viscosity of liquid
    (centipoise) =           .8000

  THE RESULTS ARE AS FOLLOWS :
-------------------------------
Superficial gas rate
   (lb/hr-sq.ft) =       982.6259
Packed column diameter
           (ft) =           1.093

Number of iterations =  7

McCabe-Thiele Analysis	HP-85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

This program can be used to quickly analyze distillation columns involving binary or pseudo-binary systems.

First, beginning on line 5000, the user types in the relative volatility as a constant or as any function of mole fraction low boiler in the liquid.

Next, the user simply types in values for six of the following seven variables and the program will automatically solve for the seventh.

* number of stripping and rectification trays, n_s and n_r
* mole fraction low boiler in the feed, z_f
* mole fraction low boiler in the distillate, x_d
* mole fraction low boiler in the bottoms, x_b
* thermal condition of the feed, q
* reflux ratio, R
* average Murphree tray efficiency

The program will graphically produce a Mc Cabe-Thiele diagram when solving for the number of trays.

Simultaneous Non-Linear Equations

Mainframe(s):

HP-85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

This program allows the user to solve a system of up to 12 simultaneous equations with the basic 16K memory and up to 20 equations with a 32K computer.
A Newton-Raphson convergence scheme is used along with a modified Gauss-Jordan reduction to solve the linearized system at each iteration.

First, beginning on line 5000, the user types in the system of equations.

Next, the user is prompted for:

* the number of equations
* the maximum acceptable error
* the maximum number of iterations
* a first quess for each of the unknowns

This is the system solved in the example on the right:

```
5000 F(1)=.5*X(1)+X(2)+.5*X(3)-X(6)/X(7)
5010 F(2)=X(3)+X(4)+2*X(5)-2/X(7)
5020 F(3)=X(1)+X(2)+X(5)-1/X(7)
5030 F(4)=-28837*X(1)-139009*X(2)-78213*
          X(3)+18927*X(4)+8427*X(5)+
          13492/X(7)-10690*X(6)/X(7)
5040 F(5)=X(1)+X(2)+X(3)+X(4)+X(5)-1
5050 F(6)=400*X(1)*X(4) 3-178370*X(3)*X(5)
5060 F(7)=X(1)*X(3)-2.6058*X(2)*X(4)
5070 RETURN
```

SERCAL - A Program to Calculate the Size of Electrical Services to Commercial Buildings	HP-83 & HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

SERCAL is designed for architects, contractors, engineers, plan checkers, and others involved in the building industry.

It produces forms designed for submittal to building inspection and permitting agencies. These forms contain complete documentation of the building's electrical service requirements, including conductor and conduit size, panel size, and overcurrent device setting. Information is presented in a clear, easy to understand format.

It also produces forms designed to aid designers in considering alternative ways of providing service to a building.

All calculations are traceable to the National Electrical Code. Sizing is done considering commercail availability and trade practice.

Input options include the ability to enter a complete list of electrical equipment, or simply an assumed number of volt-amperes per square foot for preliminary studies.

The program is simple to use. Experience indicates that a new user can learn to use the program in about 30 minutes.

The manual is easy to read and very descriptive. In addition to explaining how to use the program, it includes 11 examples that show how to use the program to do many other electrical calculations, including sizing feeders and branch circuits.

ADDITIONAL INFORMATION

This software was developed by a consulting electrical engineering firm and is used extensively in their practice. It has been extensively tested. Several people without computer experience have been quickly trained to use it.

The program is completely error trapped. It includes complete editing and storage capability. A user can keep a tape or disk record of jobs and use the edit routines to modify the data as the design process develops. Last minute changes can be quickly and easily accommodated.

It is a high quality-high value software product.

RESPONSIBILITIES STATEMENT

This software was developed by an independent software supplier for operation on HP equipment. The supplier is solely responsible for its software and support services. HP is not the manufacturer or co-developer of this software and makes no endorsement, representation or warranty, express or implied, with respect to the supplier, its products or its services.

HP USE ONLY
I.D. Code: 10023
Application Code: 100-9024
Expiration Date:

Product Name:

Multicomponent Distillation

Mainframe(s):

HP-85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

This program performs many of the calculations necessary for the analysis of multicomponent-multifeed distillation columns. The column can have up to 5 feed streams and involve as many as 15 components.

Program calculations are based on the Fenske-Underwood-Gilliland shortcut method. The software may be used to aid in the design of new columns or the rating of existing columns.

COLUMN DESIGN - The user may specify the recovery of the two key components and the reflux ratio as a multiple of the minimum reflux. The program calculates the distillate and bottoms rates and compositions, the minimum number of theoretical stages, the minimum reflux ratio, actual number of stages, operating reflux ratio, column efficiency, feed plate location, maximum vapor velocity, minimum column diameter, and condenser and reboiler temperatures and heat duties. It also generates a plot of the number of theoretical stages versus reflux ratio.

COLUMN RATING - Here the user may specify the recovery of one component, the number of plates or stages, and either the maximum vapor rate or reflux ratio. The program will determine the distillate and bottoms rates and compositions, the operating reflux ratio, the column efficiency, maximum vapor velocity, and the condenser and reboiler temperatures and duties.

The program is very flexible in that the user may allow for nonideality in both the liquid and vapor phases. If nonideal liquid is specified, liquid phase activity coefficients are determined using the Scatchard-Hilderbrand regular solution equations. The Redlich-Kwong equation of state is used to calculate fugacity coefficients in the case of nonideal gas.

Finally, the user has the option of forming a customized data file to store physical property constants of frequently used components.

CivilSoft	HP-85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

CivilSoft is a general Surveying and Site Design program that includes all the basic COGO type operations, but written in an easier to use form than standard COGO. Included is a plotting program that will allow the user to plot at any scale and any size WITHOUT USING AN EXTERNAL PLOTTER! Point storage capability is 999 max. in internal memory and the user chooses file name and size. Plots can be stored on tape and recalled for revisions or additional plots at other scales, you can even plot trees for landscape plans. Using the legal description program that is included, you can write your legals in minutes by simply inversing between computed points. Curves with radial lines that are not equal will not inverse, there is a sequential inverse routine which will save time, and bearings such as N 90 00 00 E will print Due East!

Included in CivilSoft is a complete vertical design section which includes Vertical traversing with points stored as stations and elevations, slope intersections, traversing and inversing, vertical curve design, profile plotting (user chooses horizontal and vertical scales), earthwork with cut and fill separated, and pipe and ditch design. Included also is a complete radial surveying program.

CivilSoft comes with a complete and easy to read manual which will take you step-by step through all the routines. There are no complex codes to learn, for example, you can traverse, enter side-shots, enter vertical angles from a single line without going to codes or function keys. You can enter distances as equations while inputting data. Advanced legal description program is available at no additional cost if you are to connect to the HP-82905A printer. CivilSoft is also available for the 5¼" dual disk drive, at no additional cost.

HP USE ONLY
I.D. Code: 10035
Application Code: 100-9026
Expiration Date:

Product Name:	Mainframe(s):
μ - NOIS - TAPE OR DISC	HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

μ-NOIS is a Microwave Circuit Analysis And Optimization Program with Noise Analysis and Graphics.

This program has the same capability as μ-PAC (see catalog #100-9012) but is also able to perform Noise Analysis for networks with lossless input or feedback networks. μ-PAC circuit files are compatible with μ-NOIS.

As with μ-PAC, the program is menu-driven using the soft keys for speed and convenience. Circuits are created using the Editor Module in a simple file which may be saved on tape or disc. Circuit elements include Transmission Lines (loss optional), Stubs, Microstriplines, RLC's, Transistors and Tranformers and Controlled Sources. Two Ports may be cascaded, series, parallel, or reversed.

Transistor S-Parameter data banks may be created, stored and used with circuit files through the editor. Transistor noise data requirements are Fmin, Γopt, Rn together with the S-Parameters for each frequency.

Circuits may be optimized using a modified Taylor Gradient search (also gives sensitivities) for coarse optimization and a controlled pattern search for high resolution.

Extensive graphics may be used to plot gains, Smith Chart data, GMAX, GMS, Polar plots, VSWR's, Gain Contours and I/O Mapping.

S-Parameter data either created as a file or saved from the results of an analysis may be interpolated to generate additional points or may be smoothed to eliminate errors of specified order. The results may also be saved in a user specified file and used through the editor in circuit files.

Product Name:	Mainframe(s):
LINEAR SYSTEM ANALYSIS AND FEEDBACK COMPENSATOR DESIGN	HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

This applications PAK for the HP-85 is a menu-oriented, prompt-driven, interactive program for analyzing linear systems and designing feedback compensators. Transfer function blocks may be entered in feedforward and feedback configurations to realize transfer functions for complicated linear systems.

The software computes, lists, and plots the following time domain data:

(i) impulse response
(ii) step response

The user may read time delay, rise time, and settling time.

The following frequency domain characteristics are computed, listed, and plotted:

(i) Bode plots (magnitude and phase)
(ii) Nyquist plots
(iii) root-locus plots

Gain and phase margins are computed and listed.

The PAK is organized for interactive analysis and design. Time and frequency domain plots may be overplotted to observe effects of parameters variations on response characteristics.

Software Title: AC Circuit Analysis Application Pac	Mainframe(s): HP-83/85

Software Description: The Circuit Analysis software package allows the user to model a circuit and to examine its AC performance quickly, easily, and accurately. By simulating the design on a Series 80 computer, design problems can be recognized early in the development process, before large investments have been made.

With the computer's interactive mode of operation, optimal solutions can be easily designed. To evaluate alternative designs, the user simply inputs new values for variables and reruns the simulation until the most desirable response is achieved.

Key features of the pac are:

- -Up to 9 nodes and 12 components can be analyzed. That capacity can be increased to as many as 16 nodes and 40 components by adding the optional 16K byte memory module.
- -Components allowed are resistors, capacitors, inductors, voltage-controlled sources and independent current sources.
- -Analysis can be either log or linear sweep, or single frequency points.

The following parameters can be calculated:

Node voltage (magnitude and phase); Branch voltage (magnitude and phase); Branch current (magnitude and phase); Branch power (complex); and Ratio of any two of the preceeding (in decibels if desired).

Families of curves may be plotted on the same axis.

Software Title: Waveform Analysis Application Pac	Mainframe(s): HP-83/85

Software Description: Waveform analysis has become increasingly important in acoustics, bioengineering, vibration analysis and image processing. Functions within the Waveform Analysis Application Pac include:

Hanning Function; Power Spectrum; Auto Correlation; Cross Correlation; Cross Power; Convolution; Change Domain; Modulation; F(s) Equal; and F(s) Unequal.

Data input and output functions are also included.

Data Input: With this operation, single functions can be input. The structure of the pac and the computer allow the user to analyze up to 512 data points. With the optional memory module attached to the Series 80 computer, up to 2,048 data points can be analyzed.

Double Data Input: Information on two separate functions can be entered into the system using double data input, with each function characterized by up to 256 data points on the computer or 1,024 data points using 32K memory.

Print: The print function directs the system to output data to the specified printer.

Plot: Using the plot function, the user can direct the system to output data to the graphics section of the CRT. The plots are fully annotated.

Edit: The edit function allows the user to alter time and frequency domain data and to store it on a tape cartridge or disc.

Software Title: Surveying Application Pac	Mainframe(s): HP-83/85

Software Description: The Series 80 Surveying Pac contains a group of programs chosen to aid surveyors in many of their most often encountered computations. It allows for fast and easy calculations, improves computational accuracy, and maintains coordinate point storage for easy recall of data. By using an executive program, the user has access between programs without losing stored data. The Surveying Pac also enables the user to manipulate up to 150 traverse points in a Series 80 Personal Computer using 16K memory. These points can be entered, edited or recalled for future use.

Programs included in the Series 80 Surveying Pac allow the user to:

- -Reduce field data for traverses, inverses and sideshots. (Slope distances and curved sides may be included.)
- -Make traverse adjustments by compass, transit, or Crandall's Rule.
- -Use closure routines to determine areas and distances traversed.
- -Calculate coordinate transformations.
- -Compute intersections and offsets from a point to a line.
- -Solve universal triangles.
- -Calculate parameters of circular curves, horizontal curve layout, vertical curves and grades.
- -Compute earthwork volume using the method of Average End Area, the volume of a Borrow Pit, or the resection points and land parcels within a predetermined area.

Most of the programs also provide the ability to plot data or layout on a Series 80 CRT or a peripheral plotter.

Software Title: Math Application Pac	Mainframe(s): HP-83/85

Software Description: The Math Application Pac provides quick access to commonly employed mathematical routines for use with calculus, numerical analysis, linear systems, geometry and special functions. The manual describes each program in the pac and provides relevant equations, user instructions and example problems. Programs contained in the Series 80 Math Pac include:

-Simultaneous Equations - solves the system of equations Ax=b by using Gaussian Elimination to ensure a high degree of accuracy. The program handles up to 25 equations and includes an automatic bad-data check that detects most cases of illegal data entry.
-Solution to f(x)=0 on an Interval - given a first guess, will search for the real root of the equation f(x)=0, where the user defines the continuous, real-valued function f(x) in the program memory.
-Integration with Equally and Unequally Spaced Points - approximate $\int f(x)dx$ where f(x) is represented by discrete function values at equally or unequally spaced points.
-Ordinary Differential Equations uses the Runge-Kutta method for solving systems of first order, ordinary differential equations.
-Chebyshev Polynomial program fits up to 450 points to a Chebyshev polynomial and performs interpolation on the polynomial.
-Fourier Series for Equally and Unequally Spaced Points performs a Fast Fourier and Inverse Fast Fourier Transform on a set of up to 512 time-domain points.
-Complex Number Operations - Hyperbolic sine, cosine, tangent and their inverses; complex operations: addition, multiplication, division, ln z, e^z, z^n, $z^{1/n}$; complex polymonial evaluation.
-Traingle Solutions - given any three variables of any defined plane triangle, the other three variables and the area are computed.

Software Title: General Statistics Application Pac

Mainframe(s): HP-83/85

Software Description: The General Statistics Pac offers extensive flexibility in evaluating data:

One-Sample Analysis - Basic Statistics; Ranking; Histogram; t Test; Chi-Squared Goodness of Fit.

Paired Sample Analysis - Paired t Test; Polynomial Regression; Family Regression; Sign Test; Wilcoxon Signed Rank Test; Spearmans' Rho and Kendall's Tau.

Test Statistics - Chi-Square Test for Equal and Unequal Expected Values; R X C Contingency Table; Two Sample t Test; One- and Two-Way Analysis of Variance.

Statistical Distributions section is intended to eliminate the need for most statistical tables. The right-tail probability is available for Normal; F; Student's t; Weibull; and Chi-square continuous distributions and Binomial; Poisson; and Hypergeometric discrete distributions.

Multiple Linear Regression prints means and variances for all variables. Calculates a least squares regression on up to 12 independent variables and prints the multiple correlation coefficient. Prints correlation matrix, analysis of variance table, estimates of variances and t values for the regression coefficients. Allows the user to compute estimates of the dependent variable based on the regression coefficients and independent variable values.

Software Title: Basic Statistics and Data Manipulation Application Pac	Mainframe(s): HP-83/85

Software Description: The Basic Statistics and Data Manipulation routines are capable of handling a maximum of 12 variables and 500 data values. A maximum of ten subfiles can be specified. More data values can be used by adding the 16K Memory Module.

-Start: This routine allows the user to enter data from a file or the keyboard and related information into memory. Data input even has a provision for missing values.
-Edit: The editing functions can be broken into three categories: changing data values, naming variables, and changing subfile specifications.
-Transform: Several algebraic transformations are supplied, in addition to a transformation that standardizes the data. The user can also define his own transformation. Missing value assignment allows the user to tell the program what value was used to denote missing data. The recording feature allows data to be categorized by assigning a code to a range of values of the original variable. The sort option allows the data to be arranged in ascending order, based on the values of a specified variable.
-List: The listing feature allows the user to obtain a copy of the data at any point in the analysis, either on the CRT or on a printer.
-Store: This option stores the data set and related information on any compatible mass storage device.
-Statistics: These routines calculate some simple statistics which help describe data. The following statistics are computed: Number of Observations; Mean and Median; Minimum and Maximum; Range and Midrange; Standard Deviation; Confidence Interval on the Mean; Coefficient of Variation; Correlation Matrix; Standard Error; 25th and 75th Percentile.

Software Title: Regression Analysis Application Pac	Mainframe(s): HP-83/85

Software Description: Finding the relationship between a dependent variable and one or more independent variables is a statistical technique frequently used and available with the Regression Analysis Application Pac*. After entering data using the Basic Statistics and Data Manipulation Pac (sold separately) models can be built using the regression analysis programs.

Polynomial Regression fits a polynomial of the form $y=a_0+a_1x+a_2x^2+...+a_nx^n$ to the user's data, using the least squares method to determine the coefficients. Program output includes: Mean, standard deviation, coefficient of variation of the dependent and independent variables; Correlation coefficient, r^2, standard error of estimate; Analysis of variance table with F ratios; Computed regression coefficients together with their associated standard errors and t values; and Confidence interval for each coefficient. A scatter plot of data and plots of any of the polynomials the user has chosen to examine can be obtained.

Multiple Linear Regression fits a model of the form $y=a_0=a_1x_1=a_2x_2=...=a_mx_m$ to the user's data, using the least squares method.

Multiple Linear Regression with Four Variable-Selection Procedures allows the user to examine an analysis of variance table at each step of the routine and delete insignificant variables from those previously added. The program also provides forward, backward, and stepwise selection.

Residual Analysis will automatically determine the differences between actual Y-values and predicted Y-values. This program prints a table of residuals and may plot the standardized residuals either against the observation number or against any variable.

ChemInventory - Tape Cartridge	HP-85

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

ChemInventory has been designed by a Chemist to efficiently manage any type of laboratory's chemical inventory. The tape version will run on the 16K HP-85 providing storage of 700 chemicals per tape. Multiple tapes may be used. Chemical search techniques will accept abbreviations allowing chemical catagory search along with specific record search, such as "all calcium chemicals." The data handling system used in ChemInventory not only provides alphabetizing but a very quick retrieval time for any chemical record. A GRAPHIC DISPLAY is used for chemical data entry for new records, data changes for updates, and as an easy to read display of the chemical record.

Features

Alphabetical listings
Physical Inventory Forms
Chemical Reorder Report Generator
Backorder Reports
Chemical Update Ageing Reports
Precoded-Vendor, Form & Grade entries
Data Tape Duplication
Increase or decrease File size
Extensive Manual Support
Designed to be easily modified for lab needs

Product Name:	Mainframe(s):
I. DIABETES EDUCATOR II. HYPERTENSION EDUCATOR	HP-85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific detaiis, major features and benefits, etc.)

Ia DIET RECALL -- The user enters the patient's age, height, weight, body habitus, activity level, gender and pregnancy/lactation status. A one-day caloric goal and an ideal distribution of calories, protein, fat and carbohydrate are displayed and printed. If actual weight diverges seven percent from target weight, the caloric goal is adjusted to direct the subject toward normalcy. The previous day's entire caloric consumption is entered -- food by food, quantity by quantity. When complete, the display shows actual consumption versus goal and projects weight, one year hence. Recommended changes in protein, fat and carbohydrate are printed for home study.

Ib DIABETES EDUCATION -- Five subsets of instruction are displayed. The user selects one. Singularly, a series of 10 to 41 pertinent questions (112 total) are displayed; each accompanied by its proper answer. The user interrogates the patient and inputs correctness of the response. Questioning contiunes until seven incorrect answers occur. A simple, instructional declarative statement is made for each missed question and printed. Analogies are used as needed for clarity; narrative is set to the 4th grade level; medical terms are avoided.

IIa HYPERTENSION EDUCATION -- Identical concept as in I-b with 38 questions used.

IIb HYPERTENSION TRIAGE -- The user inputs present blood pressure, patient age, visit number and medication use. The display instructs if, and/or when, physician referral should occur.

Expert Blackjack MHS-X001	HP-85A

PRODUCT DESCRIPTION: (please begin with a product abstract, then include basic product information, user-specific details, major features and benefits, etc.)

The program teaches the user the optimum strategy for playing the game of Blackjack. It consists of four parts:

1. Card Counting, where cards are flashed on the screen
2. Difficult Hand Practice, where all of the troublesome hands are reviewed
3. Betting Practice which teaches the optimum bet to place and,
4. An Actual Blackjack game, where all the rules are allowed and the player is tested for best play. The program generates statistics on the man's play as well as the strategy being used.

Software Title: Games Application Pac	Mainframe(s): HP-83/85

Software Description: The 19 programs of the Games Pac are designed primarily to provide fun. Included are card games, board games, dynamic action games, word games, and pattern generation programs. Some of the programs included in the Games Pac are:

-Blackjack - the game of 21, designed to be played by as many as 6 players.

-Slot Machine - a graphical presentation of the familiar one-armed bandit.

-Poker Solitaire - where the computer plays the same cards as you. Good strategy game.

-Sea Skirmish - a video game for one or two players with the object to sink the ship!

-Race Track - played on a randomly generated track and up to 4 players can race.

-Hangman - the familiar word guessing game. Try to guess one of the computer's words or a word someone else has entered.

-Maze Generator - generates random mazes to solve.

-Cribbage - an electronic version of the English game which pits you against the computer. The characteristic cribbage board for scoring is used on the graphics screen.

-Reversi - a game developed originally in England involving complex strategies.

-Race - a car racing game in which you, the driver, try to get the fastest time while keeping your car on the track.

-Nim - a classic computer game in which you compete against the computer to see who takes the last star from several piles.

-Birthday Plot - this program will design your very own birthday plot based on the date of your birth.

GAMES II APPLICATION PAC	HP-83/85

Software Description:

The 12 programs of the Games II Pac are a set of action games which are heavily dependent on CRT graphics and the usage of the special function keys. The programs included in the Games II Pac are:

FATCAT - You control the mouse and eat all the cheese before the cat catches you.

TANK - You try to knock out a set of targets while under fire.

ASTEROIDS - You try to knock out a set of targets while under fire.

RATPAK - Try to exterminate rabid rats that are constantly after you.

DODGE - An electronic dodge game while moving through a maze.

BULLPEN - Move blocks around to pen in the bulls before they get you.

MOON LANDER - Simulates the landing of a lunar lander on a random terrain.

SPACE WARS - As commander of a spaceship, your mission is to stop an enemy invasion.

BARRAGE - You must fend off the attacking aliens.

BATS - Avoid swooping bats and knock them out.

GNOME - A treasure seeking game of adventure.

GOLFER - A graphic simulation of a nine-hole golf course.

Software Title: Text Editing Application Pac	Mainframe(s): HP-83/85

Software Description: The Text Editing Pac allows the user to write memos, outlines, and reports on the CRT screen and edit the copy by changing words and moving sections. Text can be saved on tape or disc and can be recalled later for further editing or hard-copy printout. In addition, the text editing software provides the user with the following commands:

ADD: This function lets the user add to existing text from either the keyboard or a tape/disc file. Where the new text should be added can be specified exactly.

DELETE: This feature allows text to be deleted from memory by line number. For longer passages, the first and last lines to be deleted within a block of text can be specified and the entire block will be deleted.

REPLACE: By first specifying the lines to be replaced and then the source of the new text, text already in memory can be changed. Entire blocks of text can be replaced simply by specifying the first and last lines of the section to be altered.

MOVE: This option allows lines of text which are in memory to be moved. The user can specify the exact locations of the lines to be moved and their destinations, or move an entire block of text by identifying only the first and last lines of the block.

RENUMB: When text is edited, line numbers are not automatically associated with edited lines. The RENUMBer feature lets the user assign line numbers to these lines.
