

HEWLETT  PACKARD

MODEL  
**61**

**9861A  
TYPEWRITER**

TECHNICAL DATA NOVEMBER 1972

9861A TYPEWRITER

#### DESCRIPTION:

The HP Model 9861A Typewriter System includes the Facit Model 3841 Output Typewriter (modified) and the 11201A Typewriter Interface.

When coupled with the proper peripheral control block the Model 9861A is capable of performing three basic operations:

1. Control typewriter functions
2. Type data
3. Type alphameric messages.

Since the entire keyboard can be programmed from the calculator, the typewriter is ideally suited for producing finished reports, completely documented problem solutions or typing on preprinted forms. The typewriter can also be used manually whenever the calculator is not running a typewriter program.

All commands are available on program or manual request.

#### SPECIFICATIONS:

Programmable numeric field width and decimal point setting (w.d.).

Minimum typing rate of 12.5 characters per second.

Programmable tab set and tab clear.

Alphameric messages which exceed the right-hand margin setting will stop the program and light the status lamp.

Number of typing characters = 92.

Maximum paper width -- 16 1/8 in. (41,4 cm.)

Maximum strokes per line -- 162

Type fonts -- Pica

Keyboard -- Standard ECMA 23 code II
