

# Adobe PostScript for the HP LaserJet III Si printer

## Technical Data

**When HP PCL 5  
and optional Adobe®  
PostScript® come together,  
the language barrier  
quickly disappears.**

The double standard is over. There's no need for the expense and hassle of providing PostScript printers for PostScript users and HP LaserJet printers for everyone else. Now you can standardize with a printer that does it all: the HP LaserJet III Si printer with the authentic Adobe PostScript option from HP.

With the HP LaserJet III Si printer, you start with built-in HP PCL 5, the most advanced version of the

industry-standard PC printer language. By adding optional Adobe PostScript, you can make the most of their collective text and graphics magic.

### **A new kind of PostScript printer.**

HP has done a lot more than just provide PostScript capabilities. Using RISC technology, HP has tuned the HP LaserJet III Si printer to take PostScript to a new level of performance.

A printer that prints PostScript documents at up to 17 pages per minute...and up to 50,000 pages per month.

A printer that puts an end to the usual wait to format a PostScript file. You can even print graphics files at near-engine speed.

And thanks to HP's Resolution Enhancement technology and microfine toner, your PostScript documents look sharper than they ever could before. It's the first high-speed PostScript solution for the office that actually *increases* print quality.

And with all these advances, your HP LaserJet III Si printer has something no printer has ever had before: authentic HP PCL 5 co-resident with authentic Adobe PostScript.

### **Software switchable.**

With the Adobe PostScript option, you eliminate the need for dedicated PostScript printers. Your printer can work in either language. And switching languages is far easier than with other multi-language printers, particularly in a network environment.

### **Device independence.**

The PostScript files you print or proof with the HP LaserJet III Si printer will look the same when produced on image setters, slide makers and other PostScript output devices. There's no need for alteration or reformatting.

## Authentic Adobe PostScript.

With Adobe PostScript, you add the graphics capabilities, extensive software support, device independence, 35 scalable typefaces, and ATM\* typeface scaling to the formidable capabilities of PCL 5. It's not an emulation. Not a clone. So you're assured a complete compatibility with all PostScript-supported software... and complete compatibility with more than 650 typefaces available from the Adobe Type Library.

With HP's AppleTalk interface, you can also add compatibility with Macintoshes and AppleTalk networks.\*

## Two languages let you speak with one voice.

Adding true Adobe PostScript to true PCL 5 gives businesses a near universal printing capability. Individuals, networks, workgroups, heavy graphics and sophisticated desktop publishing users get the two printer languages they want and need.

To bring authentic Adobe PostScript to the HP LaserJet III Si printer, see your authorized HP dealer today.

\* AppleTalk available Fall 1991.
