Scanning — A Better Way

Scanners have been around for a long time, but they're no longer just for experts. Now, nearly everyone can use a scanner — legal assistants, teachers, or professional publishers — people who want to make daily tasks easier and communications more interesting.

Recognize Yourself?

Do you or your colleagues ever re-type information to edit it in a word processing package? Do you need to move data from one system to another? Have you ever wanted to store important papers electronically, but didn't want to spend the time or energy it takes to re-type them?

For research and education purposes only.

There's a lot of information floating around these days, and it's your job to get it organized quickly and make your messages distinctive. All you need is a scanner and the right software to stand out from the crowd.

Ever wish those reports you give to your boss — or the slides you show to your customers — were just a little jazzier? Have you put together manuals, product sheets, or ads with a drawing board, wax, and X-ACTO® knife? Ever fought with scissors and paste to put a graph, cartoon, or picture in a paper or presentation?

Take a Look

The samples in this booklet show you what a scanner can do and the changes it can make in the way you do everyday tasks. And high-quality, affordable, grayscale scanners like the HP ScanJet Plus scanner make those changes easy and exciting.

Imagine These Shortcuts

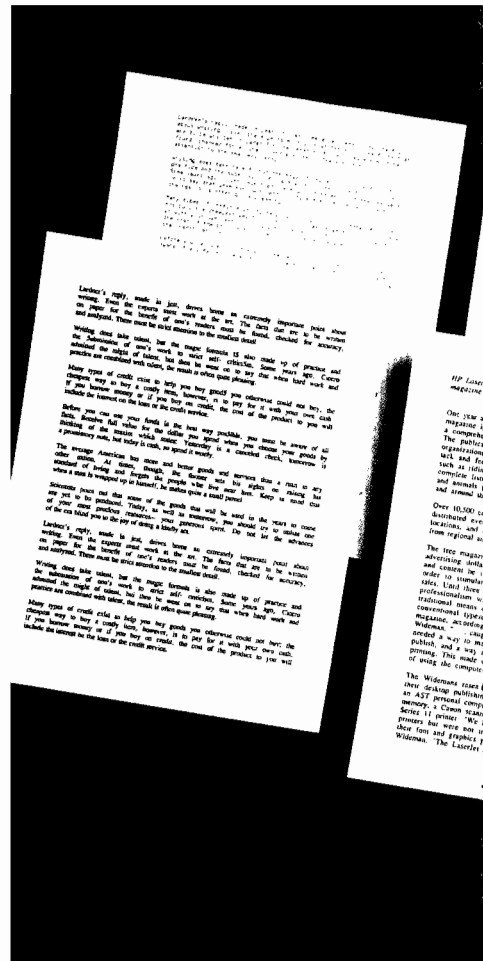

Crunch Time with OCR

These days everybody needs to accomplish more — in less time. That's why scanners and Optical Character Recognition (OCR) products have gotten so much press lately. OCR can save you time, money, and space!

Most documents that cross your desk are **dot-matrix** or laser-printed text, typewritten, or typeset. Scan them with OCR, and you've got a file you can work with.

It's even possible to scan complicated or bound pages, like **magazine articles** or **books**, and put them in a database to use when you're putting together your big report.

When you're facing a big **contract**, use OCR to clinch the deal faster. Don't wait while the revision is re-typed — scan pages automatically with a document feeder and OCR, bring them into your favorite word processor, and you're ready to add those key points.

Make your mark by teaming the HP ScanJet Plus scanner, the automatic document feeder, and a powerful OCR package. Turn an existing document into a file you can save, edit, print, or send electronically — without tedious re-typing.

Extraordinary Word-Processing

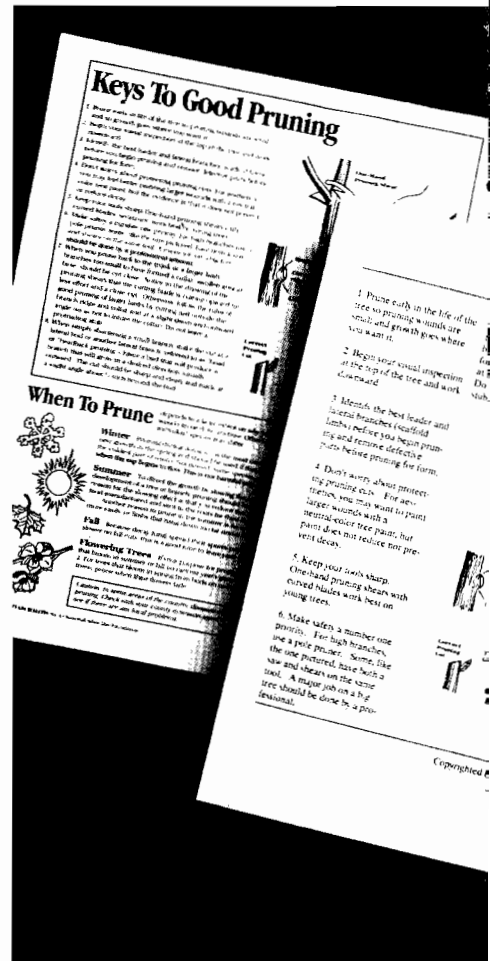

Face it. Word-processing used to be boring. Now, graphics and sophisticated formatting are becoming standard fare in popular word processing software.

Scanning graphics and importing them into word processing software refines and enhances your daily communications. You can also save re-typing time by scanning text with OCR and importing the text files into your word processor.

Pictures are indeed worth a thousand words, particularly when they clarify **instruction sheets**.

There's nothing more ordinary than lists of products or parts — liven them up with logos and illustrations, and you've got this eye-catching **catalog listing**.

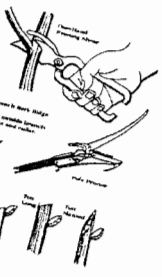

Want your **resume** to stand out? Use logos, drawings, or photos to make yours unique.

All it takes is a little imagination, the HP ScanJet Plus scanner, and the right word processing package to turn everyday documents into distinctive communications.

Great Impressions

Desktop Publishing and Presentation Power

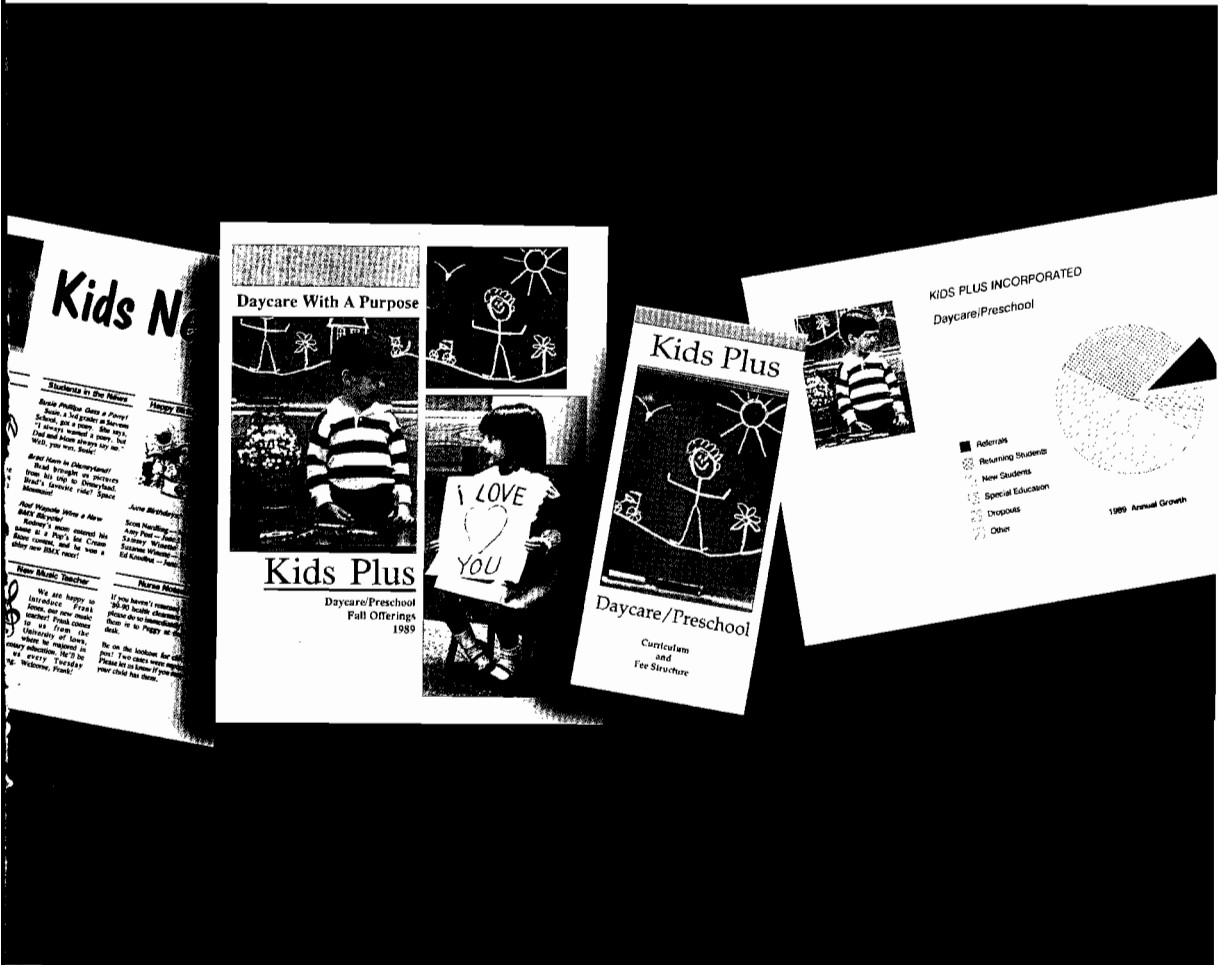

Afraid of being tossed aside in a world of look-alikes? Memorable people and successful businesses need compelling communications.

Captivate your audience with **overheads** that use images to illustrate your points. You'll leave positive impressions and an unforgettable message.

Even the most typical communications need pizzazz. **Newsletters, flyers, and brochures** no longer need to be done by professional services; put them together yourself, adding images to make them effective and lively.

Outstanding people need outstanding communications. Tell your stories with pictures using the HP ScanJet Plus scanner and desktop publishing and presentation software.

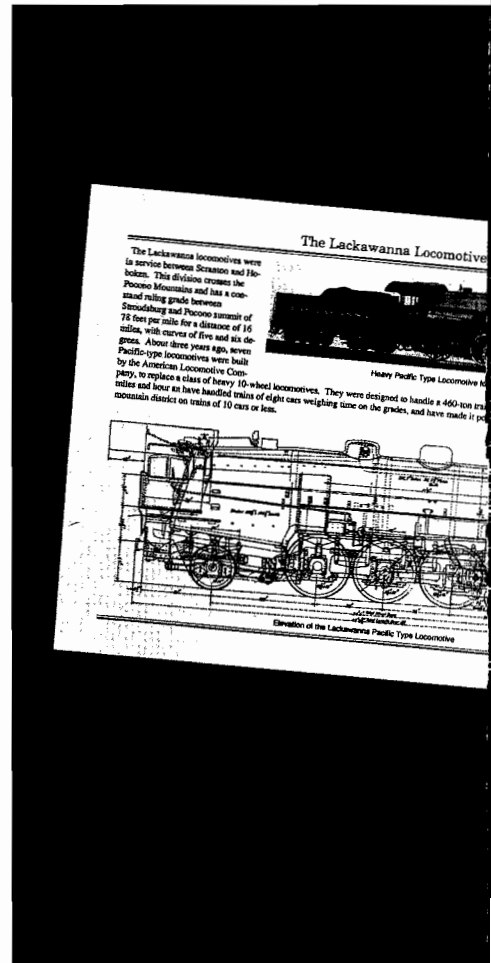

A Visible Advantage

Complexity Made Easy

To stand out, most businesses need more than impressive brochures. Technical reports, proposals, and manuals help create a company's image, too.

A few years ago, publications needing drawings or images to explain or teach were better left in the hands of a talented designer with a drawing board and X-ACTO® knife.

Now, given the right desktop publishing tools, that same designer can turn technical **articles**, **manuals**, and other complex publications into clear communications — with fewer steps and more control.

Your technical publications can be visibly better — and easier to produce — with the HP ScanJet Plus scanner and the right desktop publishing software.

Professional Publishing — A New Perspective

Okay. You'll scan images for the simpler communications, but you still leave the fancy publishing work to professional services. After all, high-resolution, quality results are achieved only by a commercial halftoning and printing process. Right?

Check again. The images on these **album**, **magazine**, and **book covers** were all scanned with the HP ScanJet Plus scanner at 256 levels of gray. Each sample was designed in a desktop publishing package, then printed on a phototypesetter as a film negative.

What does this change buy you? More time, more control, and better results! Instead of wading through phototypesetting and paste-up, the designer can see layouts immediately, experiment with different ones, and eliminate time-wasting surprises — before phototypesetting.

One glance is all it takes. Put the control back in the designer's hands with a high-quality grayscale scanner like the HP ScanJet Plus.
