

Finally, a PC CAD
Drafting Plotter
that's Solid,
Sensible,

and just \$5400.

*Designed especially for you
and your PC CAD system . . .
the DraftPro from Hewlett-Packard!*

Solid because we refuse to cut corners when it comes to quality and reliability.

Sensible because it's not loaded down with fancy extras.

And \$5400 because we want to offer you a hard-working, no-frills plotter

at an impossible-to-pass-up price.

The DraftPro handles your mechanical applications with ease — from the color layering of a part design to a vendor-ready assembly drawing. It uses C- and D-size paper, vellum, and polyester film, plotting with fiber-tip or liquid-ink pens. Best of all, it's a perfect fit with your personal computer and favorite design software.

Want to find out more? Order your *free* DraftPro Design Kit containing product literature, detailed specifications, software information, and a D-size sample plot! Simply call 1-800-367-4772 and ask for department 800A. No obligation. No commitment. Just solid information to help you make a sensible buying decision.
