

HEWLETT-PACKARD

# Join the Celebration!

**Now you can have traditional  
Hewlett-Packard quality at an  
untraditional low price . . .**

***with the HP DraftPro plotter!***

We've got great news for those of you who think an HP drafting plotter is a big investment only big companies can afford . . . meet our new, exciting DraftPro plotter!

Born of simple, sound engineering, the DraftPro offers your personal CAD system the same high-quality output as more expensive plotters — at a surprisingly unbeatable price.

What does this mean to you? No longer will your best designer spend all day at the drafting table. No longer will you have to present printer graphics to an important client.

At last, you can have quality output quickly, easily, and professionally . . .

. . . with the HP DraftPro plotter!

# Seven reasons the HP DraftPro plott

## 1. You get professional, high-quality output.

Technically speaking, the HP DraftPro has a mechanical resolution of 0.013 mm (0.0005 in.), a repeatability of 0.10 mm (0.004 in.), and is accurate to within 0.5 mm (0.02 in.) or 0.2% of the specified line length, whichever is greater.\*

To appreciate what these specifications really mean, look closely at a plot drawn by the HP DraftPro. You'll notice smooth circles and crisp characters. You'll see precise corners and consistent line widths. Most of all, you'll have the professional, high-quality output your work demands.

## 2. It's compatible with your hardware and software.

You'll be happy to know that the HP DraftPro plotter will fit perfectly with your personal CAD workstation.

It connects to a variety of computers, from the HP Vectra to the IBM AT, the DEC VAX to the Apple Macintosh. An RS-232-C/CCITT V.24 interface comes standard; HP-IB (IEEE 488-1978) can be ordered as an accessory.

And it offers the same strong software support as our other drafting plotters, which includes popular packages such as AutoCAD and VersaCAD.

## 3. The HP DraftPro plotter handles three types of media and pens.

The HP DraftPro plots on full-size sheets\*\* of paper, vellum, or polyester film. And it draws using fiber-tip pens (in lots of colors), disposable liquid-ink pens (very convenient), and refillable liquid-ink pens (many point sizes to choose from).

So whether you need a quick preliminary plot or a final-quality drawing for reproduction, the HP DraftPro provides a winning combination of media and pens.

\*This accuracy specification is for 0.08 mm (0.003 in.) polyester film from 10°C to 30°C.  
\*\*Media widths from 550 mm to 640 mm, and media lengths from 400 mm to 1000 mm. These measurements include A2/C- and A1/D-size media (and the architectural equivalents).

The IBM AT is a product of International Business Machines Corp.

The Apple Macintosh is a product of Apple Computer, Inc.

The DEC VAX is a product of Digital Equipment Corp.

# asons why er is worth celebrating!

#### 4. It's easy to use.

We've taken steps to insure that your working relationship with the HP DraftPro will be productive, pleasant, and trouble free.

The paper and pen loading procedures are simple, the front-panel controls can be mastered in minutes, and the User's Guide is clear and complete.

Also, the HP DraftPro plotter is small, lightweight (only 66 lbs!), and has its own set of wheels — so it's easy to move, it's perfect for shared environments, and it fits just about anywhere!

#### 5. The HP DraftPro won't let you down.

Hewlett-Packard knows that you need a plotter you can count on, so we've designed reliability into the HP DraftPro at every possible opportunity.

It operates in extreme temperatures (from 0°C to 55°C) and humidity. And throughout the building process, the DraftPro plotter must pass more than 200 tests to insure it meets the original design specifications.

All this guarantees the very best of performances under your routine operating conditions.

#### 6. You can depend on HP service and after-sales support.

The actual purchase of your HP DraftPro plotter is only the beginning of a strong working relationship with HP.

Each DraftPro plotter is backed by a 90-day on-site parts and labor warranty. We also guarantee the availability of service, support, and parts for at least 10 years after purchase.

Finally, if you have questions or problems, HP has more than 330 sales and service offices worldwide, ready to help.

\*U.S.A. suggested list price.

#### 7. You can afford it!

At \$5400\*, the HP DraftPro is the plotter designed especially for you and your personal CAD workstation.

It's solid and reliable. It meets our rigid standards of quality. And it gives you *the most value for your money.*

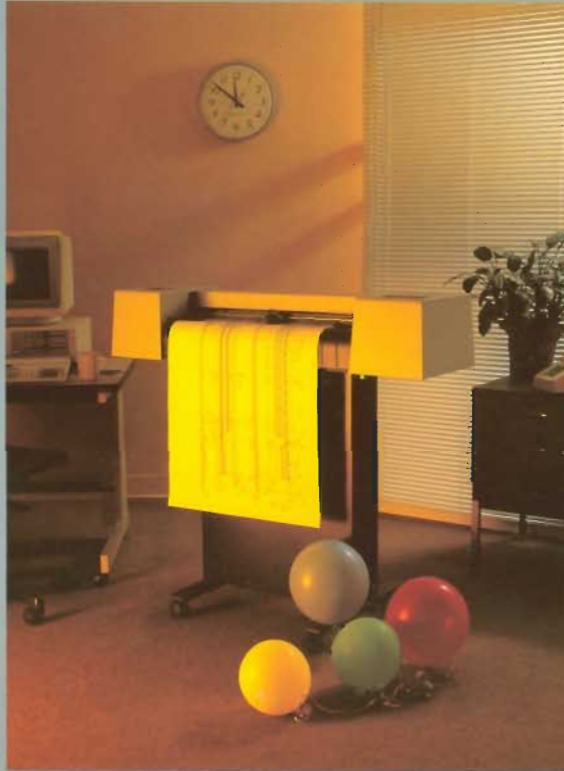

Now that's worth celebrating!

*Find out what all the excitement's about — ask for a demonstration today!*

One celebration down,  
many successes to go . . .

*with your new HP DraftPro!*
