

AM 200 Memory Board

■ **One full megabyte of memory on a single circuit board**

■ **Plugs into any I/O slot. No tools needed. And no intrusion into the computer's interior.**

■ **Excellent price/performance ratio**

■ **Traditional Infotek quality and reliability, backed by a one year warranty.**

Infotek Systems presents the AM 200 Memory with special pride. With nearly a decade of experience in developing memory products that improve the capacity of Hewlett-Packard desktops, and with solid engineering know-how, Infotek Systems has produced another singular product.

The addition of just one AM 200 memory board permits searches and sorts and manipulation of large arrays to be done in memory which saves user's time and lessens disk wear. And because our AM 200 memories are form, fit, and function interchangeable with the computer's factory installed memory boards, they can augment and/or replace one or all of them. Plug compatibility also allows use of the AM 200 in an I/O Expander.

Additional megabyte units, up to six in the 9826, 9836, and 9920, can be added to accommodate almost any storage requirement. You can add two AM 200 memory boards to an HP 9816 and still use peripherals.

Installation is easy, a simple matter of resetting switches and inserting the AM 200 into any available slot in the back plane. No need to open the machine, use a tool, or touch the computer's interior.

Once again, Infotek Systems has met the challenge created by user's needs and has responded with a reasonably priced, reliable product with a design predicated on advanced technology.

INSTALLATION

Insert into any available I/O slot. No tools required.

MEMORY ORGANIZATION

1048576 bytes, 524288 words

ACCESS TIME

250 nanoseconds

POWER REQUIREMENTS

5.5 watts max.

OPERATING TEMPERATURES

0°C to 70°C

STORAGE

-25°C to 125°C

QUANTITY DISCOUNTS AVAILABLE
