Presentation Manager Drivers

Microsoft Operating System/2 1.1 includes Presentation Manager drivers for several output devices, but does not include one for Hewlett-Packard LaserJet Printers. This means that Presentation Manager applications will be unable to use Hewlett-Packard LaserJet Printers. Character-mode OS/2 applications and MS-DOS applications (run in real mode) which print to Hewlett-Packard LaserJet Printers will continue to work with OS/2 1.1. All PC vendors shipping OS/2 1.1 face the same issue.

Microsoft, the developer of OS/2, is writing the driver. Hewlett-Packard also will distribute the driver when it becomes available. Microsoft plans to provide the driver in U.S. English initially, then in additional languages later.

Contact your local Hewlett-Packard Sales Office or Hewlett-Packard Dealer for information on the availability of the Presentation Manager LaserJet Printer Driver.

When the driver is ready, it will be available first from:

- Your local Hewlett-Packard Dealer
- Your local Hewlett-Packard Representative
- The HP Forum on the CompuServe public information service

If you do not have access to these sources, you may write on the "Comments" lines of the OS/2 Survey Card enclosed with this package:

- "LaserJet Driver" and
- The disk size you want (5.25-inch or 3.5-inch).

Delivery will be 4 to 6 weeks after the driver is available from the above sources. This offer is good only with the original OS/2 Survey Card; no duplicates, please. Hewlett-Packard personnel should contact their Office Automation Coordinator.
