HP OMNIBOOK

Superportable PCs

Technology for Freedom - No other PCs are as ready to go and easy to use, right out of the box.

If you always wanted to take your PC when travelling, but wanted something light, small, and ready to work for as long as you are, the HP OmniBook Superportable PCs might be just what you've been dreaming about.

At 1.3 kg (3 lbs), they're the smallest notebook PCs available today with a full-size keyboard. And with up to nine hours of working power, Microsoft[®] Word and Excel optionally built into ROM, and a pop-up mouse at hand at the touch of a button, they'll always be ready when you need them.

And because you need to work on the go and consult information on the road, the HP OmniBook, with its advanced feature set and lightweight form factor, is your ideal travelling companion.

Power to match your work style

They HP OmniBook has twice as much battery life as most other notebook PCs - 4 to 9 hours. And when you're not working, it takes a rest too. Battery power is conserved when there is no activity on the PC for a period of time, because memory management is built-in. Recharge the battery pack whenever it's convenient. No memory effect with the nickel metal hydride batteries which only take 1.5 hours to charge. Or just insert four alkaline or lithium batteries when you don't want to take your AC adapter. Finally, choose from our range of 386 and 486 models to select the power and performance that meet your needs.

ON button remembers for you

You don't even need to close an application before switching off your HP OmniBook. Simply turn it off. When you switch back on again, you're right back where you left off. Since this feature is part of the hardware design it will work with any software application you install.

Flash memory for higher reliability

The HP OmniBook supports flash cards as a replacement for main mass storage - the most reliable solution to date with no moving parts and less power drain than rotating disks. Just think about the convenience of this noiseless flash card memory during your strategic meetings.

PCMCIA Version 2.0 slots

Add mass storage, communication capabilities and applications using PCMCIA cards. Out of four slots, two are available for use on the flash memory version; one is available on the hard disk model. So you can easily exchange information with any other PC supporting PCMCIA mass storage cards. And with the standard PCMCIA fax modem the HP OmniBook has the ability to send electronic mail and faxes from anywhere that you are.

Pop-up mouse

This mouse is like none you've ever seen, yet it works just as you'd expect. Press the mouse-eject button and the mouse pops out of its storage area, ready for action. Nothing to cable or clip on. You don't even need a flat surface as the mouse can operate in mid-air!

Pre-loaded software

With the HP OmniBook the choice is yours! Either select MS-DOS[®] and Windows pre-installed on the hard disk and have your own customised configuration and applications. Or choose the ultimate convenience right out of the box with Microsoft Word and Excel, accompanied by a suite of PIM tools, fully integrated into ROM.

Fast access keys

With one keystroke, access and switch between any of the powerful built-in applications and any standard software application installed into RAM.

Organiser tools

Here's real convenience - your HP OmniBook wakes up and reminds you of appointments, even when it's turned off. Carry your schedule, phone list and calendar. No need to carry a separate calculator. With the HP OmniBook you carry the best calculator and all your time management tools already in one place - with you all the time.

Mobile partner to any desktop PC

Carry vital information with you by using built-in Traveling Software Laplink Remote Access to transfer files effortlessly between a desktop PC and your HP OmniBook. Benefit from true portability, access strategic files, reports and statistics, right where the decisions are made. No need for a special configuration - the HP OmniBook will automatically load the needed software to any desktop PC to use the network drives and printers or any other resources available on the desktop PC.

Infra-red interface as the ultimate docking station

The HP OmniBook has a fast, bi-directional infra-red interface that allows seamless communication with your HP Vectra desktop PC. Just put your HP OmniBook in front of the desktop and LapLink Remote Access allows you to access data and resources in both directions with no physical connection needed. Alternatively, use an optional accessory for infra-red printing and connect directly to your existing network of printers and peripheral devices. No physical connection required.
